42. Further Description of Important Features This gray frame Victorian house has fancy white trim that gives it an Italianate flavor. It has broad eaves supported by simple wood brackets which have a cut-out detail in the frieze below. The window frames are very unusual. They have rectangular hood molding with carved flowers in the corners on the second floor, and deep pediments supported by corbelled brackets on the first floor on the front, and deep cornices on the first floor sides and back. All of the window frames have wood corbels supporting		40. Visible from Public Road? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		41. Distance from and Frontage on Road 50' x 120' wide	
43. History and Significance This house was built in 1865 for Robert Page Studley. Robert Studley of New Hampshire and his wife, Mary Hutchings of Massachusetts, came to St. Louis in 1853. They lived in a log cabin where Webster College is now before their new home was ready on New Year's Day, 1866. Studley owned one of the first printing companies in St. Louis and he was one of the charter members of the Congregational Church in Webster. Lucien R. Blackmer from		44. Description of Environment and Outbuildings The property has a driveway on the north side of the house. The lawn goes back to Rock Hill Road on the back, west, and there is a wooded wilderness as a buffer.		5. Other Name(s) 225 Blackmer

the corners of the sills. The roof is flat in the center and used to have a widow's walk.

The front of the house faces east and has its front door, sidelights and transom in the center bay. A square open portico with a flat roof projects in front of the first floor, center bay. It is supported by pairs of massive, tapered, square posts, and has a cornice and a wood frieze with pairs of large carved brackets. An oriel window is in the second story of the center bay. Above the oriel is a cross gable containing a round window with a decorative wood molding.

The north side of the house has a one-story bay window with a hip roof in the third bay from the east. It has stained glass windows in its top sections. There is a dormer with a hooded roof above the second bay. The fourth bay from the east is stepped back one bay. It appears that the fifth and sixth bays were added as they have a lower roof. Those two bays are the kitchen and servants' rooms above.

The back projection (kitchen and servants' rooms) is two bays across. A one-story two-car garage with a hip roof is attached to the back.

The north side of the house has two bays in the big front section with a large, rectangular bay window with a hip roof on the first floor of the second bay from the east. The back three bays are stepped back one bay and have an open porch in front of their first floor.

43. continued

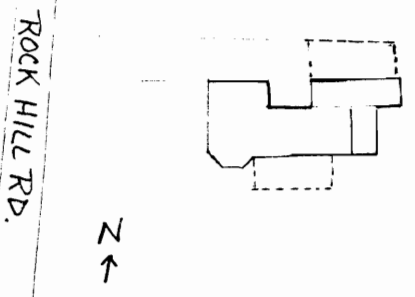

New England bought the house in 1891. He owned the Blackmer and Post Company which made sewer pipes. He started the Webster Groves Building and Loan Association in 1884 when he and his wife Caroline still lived on Marshall Place. The house had a 10-acre lawn and a winding drive leading down to stone gates at Jefferson and Swon.

between the first and second bay.

The south side of the house was originally the front, facing toward Kirkham Ave. and Webster Groves. Its western end has one bay under the main gable. On the first floor this bay is a one-story bay window with a hip roof. The next three bays are under the long side of the gable that projects to the east. The first or western-most of these three bays is the front door. These three bays have had a screened porch built in front of them on the first floor and a sleeping porch with a shed roof built across the second floor.

Recessed one bay a two story addition with a shed roof projects to the east. It is two bays long and two bays wide across the back. Its roof slopes to the east from just under the east facing gable.

The north side of the house has one bay under the main north-facing gable. Recessed one bay there are two bays across the side of the east-facing gable. Filling in one bay of the angle created by the recess is a one-story addition with a shed roof sloping back to the east with a door and a window on its east side. The two-story addition with the shed roof that projects to the east (back) contains only one bay on this side. In front of this north side of the shed roof addition a long one-story addition with a shed roof sloping north has been built. It contains four bays on this north side and thus projects beyond the back (east) side of the two-story addition. Its eastern end has three small bays under an east facing gable and there are two bays on its south facing side. There is a carport along the north side of this north addition.

43. continued

He had a long black beard, two beautiful daughters, and three sons. For one of his daughter's weddings he rented a moving van to take the bridal party to the Episcopal Church. Leone Cooper, the present owner is a well-known watercolor artist.

42 Further Description of Important Features		This once marvelous Italianate house with ship lap siding and wood quoins and other Victorian details has been severely altered with institutional additions and wide aluminum siding that covers the quoins and the window frames. The house is used as the residence for the Sisters of Loretto and other buildings of the Nerinx Hall Catholic Girls School have been built in front of it is not visible from the street, it is difficult to find, it is almost unrecognizable.		Photo	
43 History and Significance		This house was built in 1853 for Richard J. Lockwood. Born in Whiteleysburgh, Delaware in 1808, Lockwood began his Mississippi riverboat career as early as 1836 as a clerk on a riverboat. After many successful years as captain of his own steamboats, he established a ship chandler's store on the St. Louis levee, in 1842, supplying wares for boatmen. In 1850, Lockwood bought 80 acres on the Big Bend Road from Pierre Chouteau, Jr. The		it so that	
44 Description of Environment and Outbuildings		The Nerinx campus has an extensive lawn with tall trees in the front. A long circular drive leads up to the buildings. There is a large modern brick classroom building and chapel on the east side of the campus in front of the Lockwood mansion. There is a brick gymnasium with a vaulted roof in the center of the campus and it connects to

Richard J. Lockwood House

Nerinx Hall Nun's Residences 530 Lockwood

Richard J. Lockwood House
Nerinx Hall Nun's Residences 530 E. Lockwood

42. continued

The clue that gives away this treasure is the carved brackets supporting the broad eaves. The front of the Lockwood mansion faces Lockwood Ave. to the north. Its front door with side lights, pilasters and transom is in the center bay. A one-story, open, front porch with a flat roof supported by eight, fluted, Tuscan columns projects in front of the three center bays.

Long, institutional, one-story additions with flat roofs project for six bays on the east and west sides.

On the east side this addition is four bays wide. Behind it, on the second story of the old main part of the house, are four bays.

On the back of the house, after the six bay addition on the east, the main, old part of the house has four bays across the back and then a two-story, summer kitchen section projects four bays with one bay under the gable facing south. The four bays of the main part of the back of the house have a one-story sunporch with a shed roof across in front of them. What should be the center bay of the back, the third bay from the east, contains a Palladian bay window with a hip roof on the second floor, and a gable dormer.

On the west side the old Lockwood mansion is obscured, lost. It seems to have had three bays toward the north, front, and then a two-story projection to the west, projecting two bays west, and one bay wide. The one story institutional addition with the flat roof wraps around this side and is nine bays wide with an entrance under a gable portico in the center bay. There is a one-story brick addition, painted white, with a flat roof, projecting four bays behind the other addition. It is three bays across the back.

43. continued

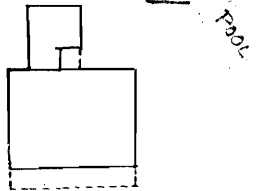

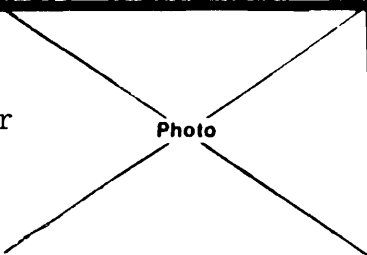

following year he married Angelica Peale Robinson, who was living near Webster with her brothers, Archibald and George. They built their big house and named it "Summer House", as a retreat from their Locust Street winter residence and the cholera epidemics. The Lockwoods had five sons and two daughters and a son by Richard's first wife. Everyone had their own bedroom, plus there were servant's quarters, a caretaker's house, stables, gardens, vineyards, a playhouse with stained glass windows, and an orchard through which one could eat his way to the Old Orchard train station. In 1924, one of the Lockwood children sold the house to the Sisters of Loretto and it is now part of Nerinx Hall High School.

44. continued

a modern one-story brick classroom building on the west of the campus. There is an open field and a parking lot behind these buildings on Garden Ave.

The house is a modified T-shape. The front is the top of the T facing south with gables on its east and west ends with large brick chimneys on each end. The front has five bays with doors in the center bay on both floors. The front door has leaded-side lights and transom. A one-story porch is across the entire front with steps leading up to the front door in the center and on the east end. The porch has a flat roof and a wooden balcony railing. The porch roof is supported by six large, square, beveled posts which are connected by a wooden railing.

The east side of the house has two bays under the main front gable. The back of this main section is recessed two bays and then projects three bays to the north (back). The kitchen door is in the first bay. This projection is one bay wide across the back and has a hip roof.

On the west side of the house there are two bays under the front main gable. The back of this section is recessed one bay and then the back projection has three bays facing west with a chimney between the northern and center bay.

42 Further Description of Important Features This white frame house with black shutters is a very irregular shape because of several additions and bay windows. It has pairs of simple carved brackets under its eaves, corniced lintles over the windows, and wooden gingerbread railings around the flat roofs of the one story bay window. The front of the house faces east. It has one broad bay under the main, hip roof on its southern end with a bay window on the first					
43 History and Significance This house was built in 1867 for George Washington Sanders and his wife Martha. George Sanders was the owner of the Sanders Rubber and Duck Co. and made his fortune by having a monopoly on rubber slickers west of the Mississippi. Everyone going west needed to purchase a slicker or a wagon cover from Sanders. Sanders was very close to his five children and on several occasions hired a private railroad car to take his family on long trips. The house used to face Lockwood and part of Maple was the drive. The house was					
44 Description of Environment and Outbuildings There are no outbuildings. The yard is very crowded and eclectic, with many trees, bushes, flowers, crocks, barrels, planters, benches, and an old pump.

floor. The center bay projects about one foot under a gable with broad returns of its eaves. This bay gives the house an Italianate feeling. The front door is in this bay, sheltered by a small broken pediment gable supported by two pairs of square posts. Originally the front had only those two bays but a one-story sunroom with a gently sloping hip roof has been added on the north. It projects one bay and is one bay wide on the north. The ground slopes down on the north exposing the full story of foundation: the basement and a one-car garage under the sunporch, entered from the back.

On the north side there is one bay above the sunporch, then the house is recessed one foot and there is another bay facing north with a bay window on the first floor, the house is then recessed two bays across the back and the kitchen projects one bay back and one bay across with a sunroom above it. In front of the kitchen door there is a deck with a railing of turned spindles and stairs lead down to the driveway.

Across the back of the house a one-story family room has been added. It is a rectangle with a gently sloping cross gable roof. It is two broad bays across the back, the south bay under the cross gable, so it projects one bay farther north than the main part of the back of the house.

The south side of the house is five bays with a one-story bay window in the second bay from the front.

42 continued

dormers with casement windows above the porch. The west bay is a two-story round tower, stone on the first floor and shingles on the second floor. It contains curved windows on three sides and has a conical roof with a copper finial.

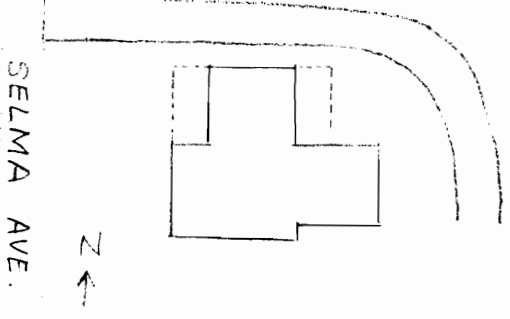

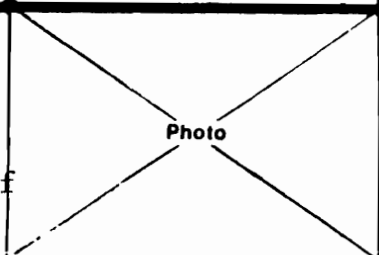

The eastern most bay of the front is the south side of a one and a half story projection, with a steep gable facing east, attached to the north half of the west side of the house. This east side of the house has a broad brick chimney running up the outside wall of the two and a half story section to the peak of the gable. There is one bay on either side of the chimney and the one and a half story projection comes off of the north bay. It has a door on the first floor facing east.

The west side of the house faces Selma Ave. It has the round tower on its south side and the rest of it is shingle to the foundation. It has one bay on its north side and seems to have a fireplace chimney running up the center as a broad brick chimney pierces the peak of the gable and the third floor has two narrow windows on either side of where the chimney would be under the gable.

The north side of the house was originally the back but the door in the second bay from the west is now used as the main entrance. There are seven random bays on this side, two stories, and there are two large bell cast gable dormers.

42. Further Description of Important Features This unusual house is beaded weather board siding on the first floor, shingles on the second floor and has steeply pitched bellcast gables with eaves reaching down to the first story in places. The front of the house faces west. Its roof line is divided in half with the south two bays under a flaired gable that faces west. The third story of this section is sided with roofing shingles and				
43 History and Significance This house was built in 1893 for William Scofield Eames. Eames was a well-known architect with the firm of Eames and Young. Eames and Young designed the Cupples Station Warehouse in 1893, on the site of Chouteau's Pond, and the Palace of Education for the 1904 World's Fair. Eames's partner, Thomas Young, built his home next to Eames' home in 1893. One of William Eames' cousins was the father of Charles Eames, the designer of				
44 Description of Environment and Outbuildings The yard is heavily wooded around the edges and has a large lawn in front. A gravel driveway runs along the north property line and curves behind the house.

contains two tall narrow windows. The north half of the front steps back one bay from the south half. The flaired eaves of the north-facing gable extend all the way down to make a porch in front of the two northern bays. The front door is in the inside bay. There is a large gable dormer with double windows in the center of this section of roof.

The north side of the house has a squared stone chimney in the center of the first story, running up inside the second story and pearcing the peak of the gable. There is one bay on either side of the chimney and the broad flaired eaves of the gable extend down over the first floor porches on the front and back.

The back, east side of the house, has a cross gable projection on its south half. The north two bays have a screened porch under their low eaves and there is a large gable dormer with double windows in the center of this section of roof. The east-facing, cross gable projects two bays and is two bays across the back. There are bell cast gable dormers with small double windows on the north and south facing sides of this projection.

The south side of the house is divided into three equal sections: the two bays of the back projection, the three narrow bays of the front gable that faces west, and a center section under a cross bell cast gable that projects about two feet and contains two bays.

and the Italianate houses built in Kirkwood in the 1850's.

The front of the house faces north. Its eastern half is longer and lower than its western half and is stepped back one bay from the western half. The eastern half contains four bays. The two center bays are glass doors on the first floor. An open porch with a plain, broad frieze and a hip roof shelters the width of this section. The western section of the house is slightly taller than the eastern section and appears to be almost square. It has three bays on the front. The large, wood front door is in its eastern bay and has sidelights and a six light transom. Across the front of this section is an open porch with a flat roof surmounted by a wooden balcony railing on the second floor. It is supported by four, square, wood posts with cornices. The windows in this section of the house have pediment lintels.

The west side of the house contains four bays in the main square section. The center two bays are doors on the first floor with a flat roofed open porch projecting in front of those doors. The porch is surmounted by a balcony railing on the second floor. A one-story addition with a hip roof continues this side of the house one bay (a door) further.

On the back of the house this one-story, kitchen addition projects in front of the three bays of the square, western section of the house. The longer, lower, eastern section of the house, which was four bays in the front, has only its east and west bays showing on the back. A one and a half story section projects one bay in front of this east section and is two bays across, under its south facing gable. This small section was found to be made of vertical logs and may be the oldest structure in Webster Groves.

The east end of the house is three bays. Its center bay is a door and has a small square open porch in front of it with a balcony on the second floor.

with a flat roof. The portico roof is surrounded by a wooden railing with a cut-out Eastlake design that is the same as the railing around the first floor of the portico. The western bay is under a cross gable, with a small window in the gable.

The west side of the house, which is now the back, has a one-story bay window with a flat roof in its northern bay.

The south side of the house, originally the back is now used as the main entrance. It contains five bays, with doors in the second and third bays from the west. The roof line is unusual. It is flat over the center three bays, making room for three stories and has half gables on either end. An open veranda runs across in front of the first floor of this side of the house. An open porch with a flat roof is on the second story of the east half of the veranda and a balcony railing surrounds the flat roof of the west half of the one-story veranda.

The east side of the house has four bays and faces Plant Avenue. Inside, the first floor has a pressed metal ceiling.

15 Name of Established District		This white frame house was originally a Victorian Italianate T shaped house. It has been greatly altered by a two story portico with a balcony roof across the front of the old house and by a large, one story addition to the east with a flat roof with a wooden railing around the top of it. A porte cochere has been added on the east side, the west side, and on the back. There is a large one story addition with a flat roof on the back and		23 W. Lockwood	
43 History and Significance		This house was built in 1863-1865 for Nathan A. Allen. Born in New York in 1819, Nathan Allen came to St. Louis in 1837. He married Carolyn Adams in 1842, and they came to Webster with their five children in 1866. Allen was in real estate and built the Allen building on the southwest corner of Gore and the Missouri Pacific tracks. The upper floor was a large hall with a stage where musicals and dances were held. Allen's son, Harry,		Photo	
44 Description of Environment and Outbuildings		The house sits on top of a high hill. The front yard is terraced with an impeccable lawn and a fountain bubbles in the center of a patio in front of the front door. Asphalt driveways go up both sides of the house and the back is all an asphalt parking lot.

42. continued

wrapping around the west side. These additions and alterations were made to accomodate the building's use as a funeral home.

The front of the original house faces south and contains three bays. It has doors in the center bay on the first floor and on the second floor. The main entrance has sidelights and had a transom but it has been filled in with panelling. The second story door opens onto a small wrought iron balcony. The window frames have cornices and black shutters, and the front of the house and all of the additions are covered with aluminum siding.

On the west side of the house one can see the brackets with tear drops and dentils between that are under all of the eaves of the roof of the old house. There are three bays under the hip roof and then the old house is recessed one bay and there is a two story projection off of the back three bays long on each side and two bays across the back under the north facing gable.

On the east side of the old house this back projection had two stories of open porches across it. The first story is obliterated with the gross funeral additions.

There are three gable dormers on the east and west side and there is a widow's walk with a wooden railing in the center of the hip roof.

43. continued

ran a bakery on the first floor. But the building burned in the early 1900's. Nathan Allen helped to organize the public school system in 1866 and the Congregational Church. The Allen family lived in this house until 1928 when it was sold to Clyde McLaughlin, who converted it for use as a funeral home. Sam Mittleberg purchased it in 1937 and operated it until Donald Gerber joined him in 1962. The pillars and the addition on the east are new but the upper porch is original.

Frank Waddock House
220 S. Forest

42. continued

The north side of the house faces Forest Ave. and contains two bays with a broad brick chimney running up the outside wall, between the bays.

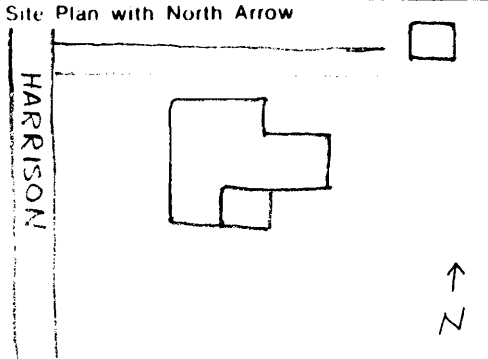

The back, or west side of the house contains four bays. In the center of this side of the house one bay projects about five feet. It contains double windows on the second floor and a semicircular bay window with a flat roof on the first floor. The southern most bay is the same width as the two northern bays and it contains a door with a small flat roof supported by brackets on the first floor and a triple window on the second floor.

The south side of the house has a one-story open veranda, with a shed roof supported by four Tuscan columns, across it. On the first floor there are two bays on the west, a door in the center, and a large triple window on the east. The second story has five windows in a single window frame.

42 Further Description of Important Features A large federal style brick house, painted white. It has a truncated hip roof with a wrought iron widow's walk on the top, and four large chimneys, corbelled at the top, one on each corner of the roof. The eaves are supported by pairs of beautifully carved brackets. All of the windows are segmented arches, 2-over-2. The windows all have the original arched shutters and they have recessed, arched lintels and wood sill molding.				3 Photo
43 History and Significance The present owner, Mrs. Betty Rannells, grew up in this house. Her father, Christopher Kraft, bought the house in 1932. An elderly black man used to come by when she was a child and tell about being the water boy for the men building this house. The bricks are said to have been made on the property and it may have been built in the 1860's. In Julius Pitzman's <u>Atlas of St. Louis City and County</u> , published in 1878, the				
44 Description of Environment and Outbuildings The yard is large and beautifully landscaped. A frame two-car garage with a hip roof sits sideways on the back of the north side of the lot. There is a small octagonal garden shed in the middle of the back yard.

Robertson Kraft House
434 N. Harrison

42. continued

The front of the house has six bays. The front door is in the north center bay surrounded by side lights and a fan light. It has doric pillastered columns supporting a segmented arched roof. In the south center bay on the first floor is a French door with a fan light and a wrought iron railing in front of it.

The sides have three bays in the front section and there is a section that protrudes from the back that is one bay deep and two bays across the back. Both of those bays are doors on the first floor. This back section is the same height and vintage as the rest of the house.

43. continued

house is shown belonging to Ellen Robertson, the wife of Archie Robertson. The Robertsons sold the property to Charles A. A. Trenchevant de St. Aubin and his wife, Clemence. Mrs. Richard Chomeau, who did much research for the Kirkwood Historical Society, was related to St. Aubin and she believes St. Aubin was an architect and adapted the house as a two family dwelling for himself and his parents.

The property was sold to Hayden and Mary Cole in 1888 and to J. Taylor Brent in 1889. Brent subdivided the property in 1889 and in 1890 sold the house to a Mr. Leppelman. In 1909, Leppelman sold the house to Dr. and Mrs. James Newby. The Newbys lived there with their daughter and son-in-law, Mrs. John Anderson until the Irwins bought it in 1920. The Irwins sold the house to Christopher Kraft, who worked for Union Electric, in 1932. At that time the house was heated by coal fireplaces and potbellied stoves. The Krafts restored and modernized the house. Mrs. Rannells had copies of titles back to the Brent's ownership in 1890 and Mrs. Chomeau had notes from the St. Louis Land Title Co.

42 Further Description of Important Features This white frame vernacular house with functional black shutters has very pleasing Federal proportions. It was originally T-shaped but the south side has been partly filled in with a one-story screened porch. The front faces west and is the straight, top edge of the T. It has five bays and the center bay is the double front door with a transom over it with four lights. A one-story porch projects in front of the		43 History and Significance This house was built in 1867 for Peers Griffin and his wife, Mary. Peers Griffin was a well-known St. Louis architect and his cousin Jotham Bigelow was a builder. Together they formed the firm of Griffin and Bigelow which built many older homes in Webster and St. Louis. Mrs. Griffin refused to live in the house at first because it was too far out in the country. Four generations of Peers Griffin's family have owned the house and it contains many of the original furnishings.		44 Description of Environment and Outbuildings The yard is a large lawn surrounded on all sides with woods for privacy. A gravel drive on the north edge of the property leads to a two-car board-and-batten garage with a gable roof.

15 Name of Established District				42 Further Description of Important Features	
				This was originally an L-shaped Victorian frame house with a cross gable roof. It has brackets under the eaves and broad returns. The house has been enlarged and the exterior has been covered with stucco.	
				The front faces south with a circular drive leading up the hill to it. There are two bays on the east side of the front under a gable that is projecting forward two bays. There are three bays in the center	
				43 History and Significance This house was built in 1867 by Jotham Bigelow, a partner in the architectural firm of Bigelow and Griffin. Peers Griffin was his cousin. Bigelow suffered financial reverses and in the late 1870's sold the house to Colonel Nathaniel Claiborne, from Sweet Springs, Virginia. His daughter, Jennie, married Robert McCormick Adams, the grandson of the inventor of the reaper, and their wedding was a social event of national prominence.	
				44 Description of Environment and Outbuildings There is a large front yard and the property lines are heavily wooded. There are many large pine trees and fruit trees and oak trees.

part of the front in a section whose gable faces west. There was originally a front porch across these three bays but all that remains is the platform and a flat roof surmounted by a balustrade protecting the double wooden front door in the inside bay, at the angle of the L. On the western end, recessed one blank bay, is a projection, one bay on the south, with two bays under the gable which faces west.

Around on the western side, behind the two bay projection, recessed one bay, are two more bays. The intersection of this angle has been filled in with a one-story sunroom with a flat roof, with a low stucco parapet wall.

On the back after the one bay projection facing west, there are two bays under the main gable which faces north, and the roof line has been extended down to the east to cover one more bay, making three bays in this main rear section. A one-story, two-car garage with a flat roof is attached to this section, facing north.

On the east side of the house, recessed two bays from the main back section is the main east facing gable. It has two bays facing the back that are a sunroom with French doors on the second floor and a screened porch on the first. A brick patio fills in this angle. The eastern gable contains three bays, its roof line is extended to the back over the extra bay. The southern bay has a French door on the first floor with a small hip roof over it and its little porch has fallen off. South of that bay the roof line is the straight side of the south facing gable over a blank bay.

43. continued

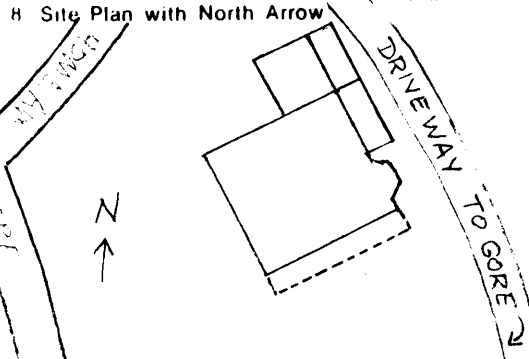

Robert and Jennie inherited the home and raised a large family there. The Janopolo family (the Greek Consul to St. Louis) stayed in the house after their famous octagonal house was destroyed by fire. At the turn of the century a Mr. Cramer owned the house. He was a plasterer and he plastered most of the 1904 World's Fair buildings. He stuccoed the exterior of this house and plastered large fancy medallions in the ceilings of the first floor.

42. Further Description of Important Features This was a large, square brick house with a hip roof, a chimney on each corner and a bay window going up to the roof on the east side. But a shorter two-story addition has been added on the back and a greenhouse has been added on the east so that the house is no longer square. The windows all have curved lintels and stone sills, there are a carved wooden frieze and fancy brackets under the eaves, and the center bay on the front projects about one foot and has a small gable over it with a broken pediment						5 Other Name(s) 300 N. Gore	
43. History and Significance This house was built in 1867 for John and Mary Fulton by Griffin and Bigelow. John Fulton was a St. Louis lawyer and an interpreter for the Mexican Consul's office and a writer on Mexico. He was also one of the 15 men who called a meeting to organize the public schools in Webster. From 1955 until 1970, this was the home of Clarissa Start, a well-known columnist for the Post Dispatch.							
44. Description of Environment and Outbuildings The large lot is heavily wooded making it very private. There are some very large trees and a paved drive goes up on the east side and out the back, connecting with the driveway to Edgewood Childrens Center. There is a brick patio surrounded by roses filling in the angle on the back.

containing a round window and a finial dripping down from the center of the gable.

The front faces south and has a one-story porch across the front; its flat roof makes a balcony surrounded by a cut-out wooden railing that matches the porch railing on the first floor. A broad wooden stairway leads up to the center of the porch. The center bay contains the glass, double front door, which has a fancy stained glass window in its curved transom. Above the front door is a door onto the balcony. The windows on both floors in both of the side front bays are double, under large, curved lintels with carved wooden frames.

On the east side the first bay is the bay window to the roof. After three bays is the shorter two-story addition, with a hip roof, one bay wide. The greenhouse with a shed roof projects to the east from this back addition. It projects one bay and is about 2 bays long so that it projects farther in the back than the brick addition.

The addition on the back is two bays across but only covers the eastern most of the three bays on the back of the main section of the house. The center bay on the back is French doors and the western bay is the large double windows that are on the front.

The west side of the house has two bays on the main part of the house. One bay faces west from the back addition and one bay faces west from the greenhouse addition.

42. continued

The front of the house faces north toward Lockwood. The tall, double front door, pillasters, side lights, transom and small, hip-roofed shelter supported by fancy brackets, are in the center bay. The western bay contains a one-story bay window with a hip roof, and there is a double window above it under the cross gable. This cross-gable bay projects about two feet forward from the center bay.

The eastern side of the house faces Rockhill Road and is the side visible from the street. There are only two bays to the main, two-story portion of the house. The southern bay projects about two feet toward the east under an east-facing cross gable. It has a one-story bay window with a hip roof.

The back of the main part of the house has only one window on its east side. But there is a one and a half story brick projection off of the center of the back with its gable facing south and a cupola in the center of its roof. It is two bays deep on the east and west side and four bays across the back. This projection contains the kitchen and was probably always for servants and cooking. Along the east side of this back projection, visible from Rockhill Rd., the roof has been extended to cover a one-story screened porch. The roof line is surmounted by a wrought iron railing and the same railing fills in the bottom half of the screens.

On the west side of the back projection a one-story two-car garage with a shed roof has been added. A greenhouse is added on west of the garage. In front of the garage and back kitchen projection is the main, two-story, part of the house. It contains three bays. The southern of these three bays projects about one foot under a cross gable facing west and has a bay window on the first floor with a shed roof.

been added to extend the living room. There are four gable dormers with arched windows under broken pediments, and the southern dormer is farther apart from the northern three. The front door, in the second bay from the north, has a fan light and is protected by a small red tile gable with a broken pediment supported by Doric columns. Above the door is a single window. All the other windows are arranged like tryptics with double-hung windows, six-over-six, in the center and narrow, double-hung windows, two-over-two, on either side, inside the wood frame.

On the north side of the house under the broad gable there are three pairs of French doors with fan lights on the first floor, five bays on the second floor, and a triple window in the gable. A screened porch with a red tile hip roof projects in front of the center section of the first floor.

The back of the house faces east and has four bays. The second bay from the north has two and a half stories of porches projecting in front of it, under a cross gable. It is a screened porch on the first floor and a sun porch on the second floor and there is a small window in the pediment. Inside the porch on the first floor is the large double door with a transom that is thought to be the original front door. The other bays contain double windows.

The north side of the house contains three bays under the broad gable. There is a rectangular oriel window with a shed roof the in the west bay, first floor. The back bay is a door and there is an open porch in front of it and the center bay, with a flat roof and cornice surmounted by a wooden railing.

hip roof supported by fluted doric columns, spreads across the front of the house and wraps around one broad bay on each side of the house.

On the north side the house steps back one broad bay from the front and then has a projection, one bay deep under a cross gable facing north. There is a door onto the front veranda, on the west side of this projection and triple, double-hung windows in the center west bay on the first and second floors. The center east bay is double, double-hung windows. The fourth bay on the north, the back, east bay is an addition under a lower, shed roof. The windows in this addition are much shorter than the windows in the rest of the house.

The back addition, one bay deep, is three bays across the back. On the south side of this addition the kitchen door opens onto a screen porch and has stairs leading down to the back yard. The recess of both bays on the back south corner is filled in with two stories of screened porches with a hip roof.

The south side of the main part of the house under the steep hip roof contains three bays. The front two bays are blank on the first floor and the back bay contains a one-story bay window with a hip roof. The middle bay contains a gable dormer with a louvered opening.

church and its square bell tower with Gothic louvered openings and metal steeple on the south side of the church. Inside this oldest part of the church is the main part of the sanctuary.

Behind and to the west of this oldest part of the church a 1½ story transept was added in 1889 with its gables facing north and south with three Gothic stained glass windows and a rose window under each gable.

Behind the transept to the west a two-story addition was made in 1906. It has a flat roof with three bays by three bays and contains the sacristy, a large dining hall and offices upstairs.

In 1915, a one story kitchen two bays deep and eight bays long was added west of the dining hall.

In 1933, a two story Sunday school building was erected, projecting north from the west end of the north side of the church. It is three bays by three bays. It seems to be of a Collegiate Gothic style with leaded windows and doors and windows and gables articulated with polished limestone. The second story windows are very large, set in gable wall dormers on the east and north sides. There are buttresses at the corners of this addition and between the bays on the east side. A large wooden Gothic double door is in the center bay of the east side.

Two stories of offices with a flat roof were added in 1947 and project from the west end of the south side. They project four bays of double windows and are three bays across the south side with double doors under rectangular hood moulding.

In 1952 a one story chapel with a flat roof was added to the width of the south side of the old church. It has four bays of Gothic stained glass windows with buttresses between them.

In 1964-65 a large one and a half story narthex was added to the front of the building facing east. It has large wooden double doors under a carved Gothic stone door frame with a rose window above it, all under the broad east facing gable. This newest addition has one doorway on its north side and two doorways on its south side.

43. continued

A bell in the tower is inscribed "Jeanie Lockwood, 1867", for Jeanie, the Lockwood's little girl. She was seven or eight at the time and a metal cross on top of the steeple was made to be exactly Jeanie's height.

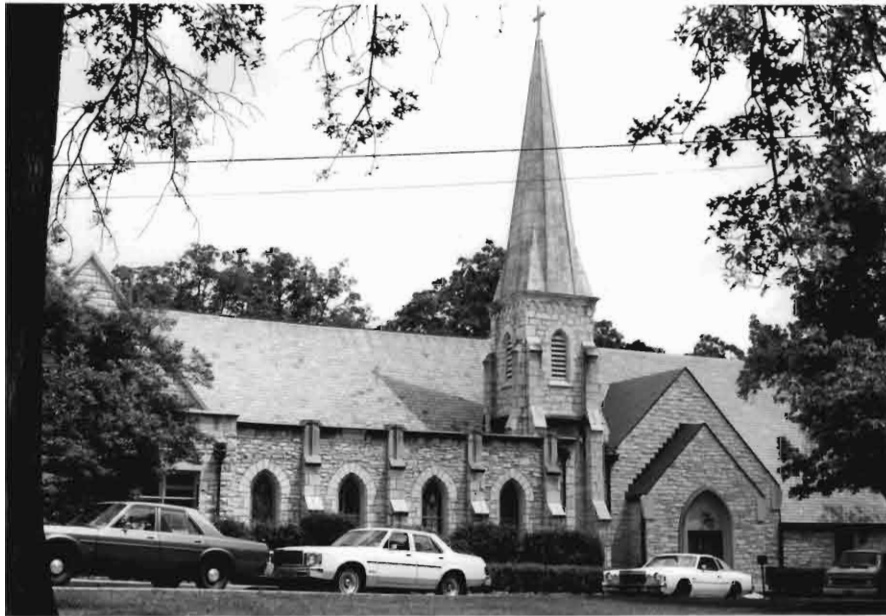

The 1933, two story Sunday school building was designed by architect Charles Thurston. The 1948 two story office addition was designed by Study, Farrar and Majers. Thompson Chapel, added in 1952, was

43. continued

designed by Hugo Graf. And the 1964 Narthex addition was designed by R.L. Fischer Associates.

45. continued

42. continued

with small gable dormers on each side, is in the center of the front of the church and was added in 1893. It has two bays of Gothic arched louvers on each side of its second story. The first story is the main entrance; double oak doors under a stained glass transom, recessed into a Gothic arch which projects the depth of one stone making a shelter around the door with a limestone gable. A broad flight of stairs leads down to the street. East of the steeple is a section of the church added in 1893 with gables facing north and east and south. The north (front) facing gable contains one large, leaded, blue, stained glass window under a Gothic arch. This only shows on the second story. In 1923, a one story narthex addition was built across the front of the eastern section of the church. It has three bays of leaded windows and a flat roof surmounted by broad battlements.

The east side of the building is two and a half stories under a gable articulated with a white terra cotta parapet. On this side the main floor is actually on the second story. The main floor contains three symmetrical bays, the center bay being a large stained glass window under a Gothic arch, and the bays on either side being small stained glass windows under Gothic arches. There is a door onto a fire escape between the north and center bays but the symmetry of the three stained glass windows seems more important than this fourth bay. Three small Gothic arched indentations are in the gable. Between the first and second floors is a massive stone watertable. The first floor is four bays, two of which fit under the large, center stained glass window, continuing its outer lines. The one story narthex addition on the front adds one bay, on the north.

The south, back side of the older parts of the church is the equivalent of six bays. The eastern bay contains a stained glass window under a Gothic arch on the second story. The next three bays are under a cross gable with a large blue stained glass window under a Gothic arch on the third story in the gable. There are stone buttresses on the outsides of these three bays defining the outside edges of the gable section. There is another bay to the west and then the gable of the oldest part of the original church. Off of this section of the back of the church, two large rectangular, two-story Sunday school buildings have been added one in 1926 and one in 1956.

43. continued

Civil War. The only other Congregational church in the state of Missouri at that time was the First Congregational Church of St. Louis, partly because Congregationalism was associated with New England and abolitionism.

The first public worship was held in February 1866, in the Chapel Grove Seminary, a private school built by John Helfenstein, Robert Studley, and William Plant, on Lockwood at Jefferson Rd. A small stone church was built at the present location in 1870 by F. William Raeder, the architect of

sidelights and a fan light. There is a hip dormer above the center bay containing three casement windows.

On the east side of the house a one-story family room was added in the 1930's. It has a flat roof and French doors on the front and back and two bays facing east. There are two bays above this addition on the original house and one full bay extends behind the addition on the original house.

On the westside of the house a one story garage with a shed roof has been attached. It is only wide enough for one car but it is long enough for two cars and has entrances at both ends. Above the front part of the garage a small, square room has been added with a flat roof and one window on the front and one on the back. There is a gable dormer above the back, south bay on this side of the house.

The back of the house is the old square house, three bays on the second floor and four bays on the first with a door with a gable portico in the second bay from the east.

43. continued

In December, 1851, while fording the River Des Peres at Big Bend with a wagon load of materials for his house, Jones' wagon over turned in the icy River Des Peres. Jones caught pneumonia and died. His wife, Elizabeth Jones, who had been married twice before, married John Richardson, a widower, in 1852. When John Richardson died in 1876, the land was subdivided among their many children according to their relationship to each other. Mrs. Richardson kept this house until her death before the turn of the century. The Richardsons attended Emmanuel Episcopal Church.

A Dr. Barnes remodeled the house in the 1930's, adding the wing on the east side. The contracting work was done by one of his patients who could not pay his bill.

east end.

The addition made by Harris Armstrong in 1929, has its main gable facing north and south and a cross gable facing west. It is slightly taller than the older section. The south side of the addition contains three bays. The center bay contains a large arched wooden door. The door frame is articulated and decorated with bricks in a Mediterranean style. Above the door the gable projects like an oriel or dormer, its fluted bottom articulated and corbelled with bricks. It contains four pairs of casement windows. The top half of this gable dormer and the further gable angles on either side of the projecting dormer, are faced with wide boards stained dark brown. The western bay on the first floor is a series of casement windows, the center bay being twice as many windows as either end. The center bay contains two pairs of small casement windows in its gable and has wide boards stained dark brown above them.

Congregational Church.

In 1911, Mr. William Yeager offered to donate the lot on the corner of Maple and Cedar to the Monday Club if they would house the public library and staff it for two afternoons and evenings a week. The building was dedicated on October 9, 1911 and the provision for the library was carried out until 1929 when the library moved into the high school. The original club house had a dining room, kitchen and an assembly hall, the walls of which were lined with bookshelves.

The club worked for such causes as establishing a lunchroom at the high school, civil service reform, pure food laws, and they formed the nucleus for the first chapter of the American Red Cross west of the Mississippi.

The building was used as the Christian Science Church for a while.

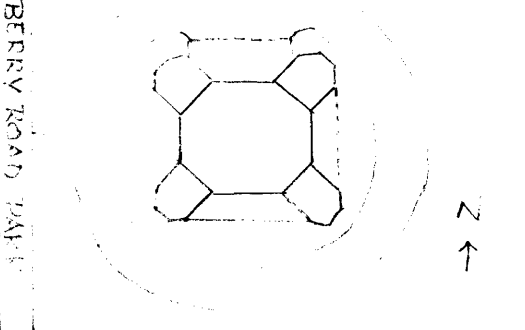

In 1929, Harris Armstrong designed a small expansion to the Monday Club.

The building is still used for club meetings, lectures, recitals, art exhibits and dances.

42. Further Description of Important Features		This house has a large, two-story, octagonal room in the center with a vaulted ceiling and a balcony all around it. Two story projections form the arms of a Greek cross on four corners. The projections are each one room upstairs and one room downstairs, inside. They are each eight sided, one bay on a side, but the projecting sides are longer than the ends. The walls of the center rotunda that span the area between the arms of the cross are one large or two or three small bays. There are cornices		Photo	
43 History and Significance		This house was built in 1886 for Demetrius Jannopoulo and his wife Elene. Jannopoulo was the owner of the Missouri Tent and Awning Companing and the Greek Consul in St. Louis. The house was built in the shape of a Greek Cross and sat in the middle of 30 acres with a long, tree-lined drive leading up from Lee Avenue. It was called Parnassus or the Octagonal House and was made famous in a book by Ariadne Thompson, called <u>The Octagonal</u>			
44 Description of Environment and Outbuildings		This house is situated in the middle of a circular block with newer houses all around it. It has an asphalt drive coming up to it on the back, west side and circling all the way around it. There is an expansive lawn on the east side of the house and the edges of the property are heavily wooded for privacy. There are several very		5 Other Name(s) 66 Berry Rd. Park

over each window and a frieze and dentils and a cornice around the edge of the roof.

The front of the house faces east. The area between the arms of the cross is filled in with a two story open portico with a flat roof supported by four, massive, two story, fluted, Ionic columns. The double glass doors are surrounded by fluted pilasters, a transom and a cornice.

The side of the house that faces south is filled in with two stories of screened porches.

The side of the house that faces north is filled in with a large cement patio surrounded by a wooden railing. There is a two car garage under this patio.

The back side of the house faces west and has a wrought iron balcony across the second story.

west end of the front and has been remodeled as the Elizabeth Holloway Woods Chapel. It has a low, square, two-story bell tower with double wooden doors under a Gothic arch on the west and a broad gable containing a large Gothic arched stained glass window. The Elizabeth Holloway Woods Chapel is connected to the large sanctuary, which was built in 1924, by a flat-roofed colonnade, two arched doorways and an arched window. The sanctuary is taller, two stories, with a huge rose window in its south facing gable and small polished limestone towers on both corners of this gable. Projecting in front of this main gable is a one-story vestibule with a flat roof and containing three pairs of double wooden doors under carved limestone Gothic arches. Projecting on both sides of this main sanctuary gable are $1\frac{1}{2}$ story gables facing east and west, one bay deep and one bay across, which form the narthex.

The east side of the church contains five large, tall, stained glass windows separated by deep buttresses. Behind the sanctuary to the north is a blank stone section with a flat roof, one story high.

The west side of the church is obscured because it is so close to the Webster Groves Trust Co. Behind the square bell tower with its high triple Gothic louvered openings, is a two story section with a flat roof, four bays wide with a door in the last bay.

On the back of the church on the north, there are two large yellow brick additions, two and a half stories high with flat roofs.

43. one on New Year's Day, 1958. For a while, the church bell served as the community fire bell.

St. John's Episcopal Church, 1880s
