**NATIONAL REGISTER OF HISTORIC PLACES
REGISTRATION FORM**

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in How to Complete the National Register of Historic Places Registration Form (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

historic name Old Hyde Park West Historic District
other names/site number N/A

2. Location

street & number Roughly bounded by Linwood Blvd., Central, 39th St., and Baltimore St. not for publication N/A
city or town Kansas City vicinity N/A
state Missouri code MO county Jackson code 095 zip code 64110-11

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act of 1986, as amended, I hereby certify that this

nomination request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property meets does not meet the National Register Criteria. I recommend that this property be considered significant nationally statewide locally. (See continuation sheet for additional comments.)

8. Statement of Significance

Applicable National Register Criteria

- [X] A Property is associated with events that have made a significant contribution to the broad patterns of our history.
[] B Property is associated with the lives of persons significant in our past.
[X] C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
[] D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations

- [] A owned by a religious institution or used for religious purposes.
[] B removed from its original location.
[] C a birthplace or a grave.
[] D a cemetery.
[] E a reconstructed building, object, or structure.
[] F a commemorative property.
[] G less than 50 years of age or achieved significance within the last 50 years.

Areas of Significance

Old Hyde Park West Historic District
Jackson County, Missouri

The Old Hyde Park West Historic District is a residential neighborhood located of Kansas City, Jackson County, Missouri. Located in the city's "Midtown" area about three miles south of the Central Business District, Old Hyde Park West is roughly bounded by Central Street on the West, 39th Street on the south, Baltimore Avenue on the east, and Linwood Avenue on the north. The Old Hyde Park West district is limited mainly to properties constructed as residences along Central, Baltimore, Wyandotte, and numbered side streets. The proposed historic district contains 319 resources. Of this total, 261 are contributing and 43 are non-contributing (23 of the noncontributing are garages/outbuildings). The district also includes 15 buildings previously listed on the National Register. Only 15 of the primary buildings date after 1930. The level of integrity from property to property and block to block is high. Prevalent architectural styles include Prairie/Craftsman, Foursquare, Queen Anne, Classical Revival and Tudor Revival, and the locally popular Kansas City Shirtwaist Style. The streets are lined with concrete sidewalks, streetlamps, and mature trees.

The neighborhood is designed on the grid pattern between the major thoroughfares of Broadway, Main, Linwood, and 39th Streets. The single lots are 50 feet along the frontage and about 125-150 feet deep. One factor in the design of this suburb was their proximity to the streetcar lines along Main, Broadway, and Linwood. Since the automobile had yet to gain widespread popularity and the streetcars provided convenient transportation, the majority of the houses and apartment buildings did not have driveways and parking lots. Most of the existing driveways and lots were constructed at later dates.

The topography of the area slopes up from Union Station train station (Pershing Road) and Crown Center shopping center, then down to Brush Creek near 47th Street. This topography is reflected in the streetscape by the prevalent use of limestone retaining walls throughout the district that vary from one to five feet, depending on the area.

The proposed historic district contains 58 multifamily residences constructed before World War I. The period of most rapid growth was the decade after 1900 when 164 residences were constructed. The table below illustrates the major building periods for the Old Hyde Park West Historic District properties. The first period includes all construction before 1900, which illustrates the beginning of the building boom in the neighborhood. Between 1900-1909, 58 percent of the buildings in the district were completed. By 1929, the last building in the district was complete, which led to a period of no construction in the district until 1953. There was a secondary demolition and construction boom in the 1960s, when many apartment buildings were constructed throughout the district, but they are outside the period of significance.

Old Hyde Park West Historic District
Jackson County, Missouri

Building Dates by Period:	
1880-1889	5
1890-1899	37
1900-1909	164
1910-1919	38
1920-1929	22
1930-1939	0
1940-1949	0
1950-1959	2
1960-1969	13

Included in the Old Hyde Park West Historic District are single-family residences, duplexes and multi-family apartments, the majority constructed before World War I. While single-family residences comprise the majority of buildings in the district, multi-unit dwellings represent the bulk of construction from a second building episode between the end of World War I and 1927.

The Old Hyde Park Historic District was developed during a period of great architectural variety. The late 19th century was the heyday of exuberant Victorian architecture, while the early 20th century witnessed the return of more subdued Classical and Colonial Revival styles, the exploration of traditional Craftsman themes, and the development of the uniquely Midwestern Prairie style. The architectural vocabulary of these varied styles is represented both individually and in unique amalgamations on buildings throughout the District. The result is a neighborhood of substantial residences, eclectic in design, that present a streetscape largely unchanged since the 1920s.

The single-family residences represent the variety of architectural fashions popular from the end of the nineteenth century through World War I. Most of the single-family homes are 1 to 2 ½ stories. While a few architect-designed properties are included in the district, the majority are vernacular house forms embellished with stylistic elements. The locally popular "Kansas City Shirtwaist," a variation of the midwestern foursquare house, predominates. These houses are clad with brick or stone on the first story and shingles, clapboards, or stucco on the upper stories. Most have full-width or wraparound front porches and multiple roof dormers. Architectural embellishments reflect the various architectural styles elaborated below.

United States Department of the Interior
National Park Service

National Register of Historic Places Continuation Sheet

Section
number 7 Page 3

Old Hyde Park West Historic District
Jackson County, Missouri

Queen Anne: shingled siding, asymmetrical plan, wraparound porch, stained glass windows, decorative stick work

Colonial Revival: center hall plan, gabled portico, pent overhang, sidelights

Neoclassical: columns, cornice returns, dentils, modillions, Palladian window

Tudor: small multi-light sash, simulated half-timbering

Prairie: wide eaves, banded windows

Craftsman: knee braces, exposed rafter tails, multiple gables and dormers, leaded and art glass windows

These same styles, whose features were adopted for vernacular designs, are typical of the few high-style residences extant in the district.

Multi-unit dwellings were constructed in the district from the beginning. These dwellings in general range from 2 to 4 stories, though there are a few taller apartment buildings. Prior to 1910, over eighty-percent of the construction was for single-family residences. However, after 1910 that trend shifted as increased population demands necessitated the construction of multi-unit buildings. Between 1910 and World War II, sixty-five percent of the residential construction in Old Hyde Park West contained multiple units. That number increased to eighty-five percent in the decade following the war.

The most prolific type of multi-unit dwelling in the district is the Colonnaded Apartment. These two to three story, brick buildings typically contain four to six apartment units. Front porches elevated on columns and piers of different orders distinguish these apartments. The columns range from simple, posts to full-height, fluted Corinthian designs.

Following the war, apartment designs became larger, porchless, and more functional with minimal ornament influenced by historical European architecture. Fewer buildings were constructed, but each contained substantially more apartments than the earlier four or six unit buildings.

Most of the buildings contributing to the historic district have suffered few changes. The most common alterations involve the covering of historic siding and alteration of porch elements. A number of buildings have replacement windows as well. Exterior wood stairs leading to the second and third stories are found on many of the homes that were converted into apartments during the 1940s. While the neighborhood has seen a number of changes over time, not unlike many streetcar suburbs in the United States, the overall integrity and feel of the district convey that of a turn of the century streetcar suburb.

Previously listed (3/17/1978)

Building Date: 1887-89; *Stories:* 2 1/2; *Plan:* Irregular; *Style:* Queen Anne; *Architect:* (Unknown); *Builder:* (Unknown); *Property Type:* Domestic, single dwelling; *Integrity:* Excellent

Description: This 2 1/2-story building has a stone foundation, a brick frame, and uses brick cladding materials with a gabled, composition roof. The front porch is ell shaped with a hip roof. The building also has bracketed and modillioned eaves; turned porch posts with brackets and pendants; arched window openings; corbelled chimney; stone lintels and sills. The dwelling was constructed with elements of the Queen Anne and Italianate architectural styles combined in a "builder's vernacular." The main façade faces north. Exterior walls are pressed brick, common bond. East façade has projecting square bay, west façade has semi-hexagonal bay. Fenestration consists of double-hung windows symmetrically placed and three hinged leaded art glass windows produced by the Tiffany Studio. Porches cover all four entrances. The W.F. Shelley Residence is significant as an outstanding surviving example of a typical residential design found throughout the once fashionable

Historic Name: Ellison Hotel

Previously listed as part of *Armour Boulevard Multiple Resources – District I (7/28/1983)*

Building Date: 1928; *Stories:* 7; *Plan:* U-shaped; *Style:* English Gothic; *Architect:* Nelle E. Peters; *Builder:* (Unknown); *Property Type:* Domestic, multiple dwelling; *Integrity:* Excellent

Description: This seven-story building has a stone foundation, and uses brick cladding materials. The first story is fenestrated with round arched windows trimmed with terra cotta. The buildings' two units are bridged by a central portal with terra cotta surround. Strong vertical emphasis is created by the brick piers, which rise from the 2nd through 7th stories. The flanking bays on each unit carry a steep gable. The parapet wall is decorated with intermittent terra cotta pinnacles. Terra cotta is also used for the quoining that occurs in both units on the flanking bays. Begun in late 1926 for the Phillips Building Company, the hotel originated as a single unit. The second identical unit was constructed some months later. The hotel featured such modern conveniences as automatic elevators and mechanical refrigeration. Studio apartments were available in the buildings, which was a new type of unit for Armour Boulevard.

72Old Hyde Park West Historic District
Jackson County, Missouri

The *Old Hyde Park West Historic District* of Kansas City, Jackson County, Missouri, is significant under National Register Criterion A for the area of COMMUNITY PLANNING AND DEVELOPMENT (1887-1938) and under Criterion C for the area of ARCHITECTURE (1887-1938). The district is significant as an example of a streetcar suburb developed for the growing middle class population of Kansas City at the turn of the century. The initial development of the area coincided with the construction of streetcar lines to the south of the business district in 1887 and with the growth of industrial and manufacturing enterprises in the West Bottoms. The Old Hyde Park West district also represents a variety of late 19th and early 20th century architectural styles. While only a few were designed by architects, the vernacular forms, such as the Kansas City Shirtwaist and Colonnaded Apartment Building are representative examples of middle and upper class housing at the turn of the century in Kansas City. The proposed Old Hyde Park West historic district contains 281 primary buildings, only 15 of which date after 1930. Including the outbuildings, there are 319 resources in the district. Of these, 261 are contributing, 43 are noncontributing properties, and 15 were previously listed on the National Register. The level of integrity from property to property and block to block is high. Prevalent architectural styles include Prairie/Craftsman, Foursquare, Queen Anne, Classical and Tudor Revival, and the locally popular Kansas City Shirtwaist Style. The period of significance is 1887-1938 which includes the date of earliest construction in the district through the end of the last major period of development.

The Old Hyde Park West Historic District meets the criteria for Community Planning and Development as a strong example of a streetcar suburb. The district represents the transformation of Kansas City's rural farmland into urban residential development, made possible by the streetcar. The initial development of the neighborhood coincided with the construction of the streetcar lines to the south of the business district in 1887 and with the expansion of industrial and manufacturing enterprises in the West Bottoms area along the Missouri River. The area's combination of streetcar lines and grid layout characterizes the development of Kansas City as a transportation hub and important commercial center. During the period of significance, the area evolved from a fashionable, upper class, country retreat to a middle class streetcar suburb, largely commissioned by speculative developers, designed by some of the city's most prolific architects, and occupied by a rising class of industrial managers and other professionals.

Old Hyde Park West meets the criteria for Architecture via its representation of a variety of late 19th century and early 20th Century architectural style. The most prevalent examples are Prairie/Craftsman, Queen Anne, American Foursquare, Neoclassical and various Revival styles. While only a minority were designed by architects, the vernacular forms, such as the Kansas City Shirtwaist and the Colonnaded Apartment Building, are good representative examples of the middle and upper class housing in turn-of-the-century Kansas City. When combined, these architectural styles are reflective of the eclectic mix of design and materials that appealed to the tastes and means of both middle and upper middle class residents.

Since 1994, the neighborhood has been recognized as part of the Old Hyde Park local historic district. The locally-recognized Old Hyde Park district encompasses the South Side National Register Historic District, a

United States Department of the Interior
National Park ServiceNational Register of Historic Places
Continuation SheetSection
number 8 Page 73Old Hyde Park West Historic District
Jackson County, Missouri

commercial district that runs along Main Street. Because the South Side district divides the residential neighborhood and makes it non-contiguous, the residential neighborhood was separated into Old Hyde Park East and Old Hyde Park West. Old Hyde Park East has been submitted as a separate nomination.

The proposed district is located proximate to at least four other districts located on the National Register. The South Side Commercial District, which runs along Main Street, effectively serves as a dividing line between the proposed districts of Old Hyde Park East and Old Hyde Park West. The South Side district was placed on the National Register in 1981. The Armour Boulevard Multiple Resource Area, District I, located northwest of the proposed district between Broadway and Baltimore Avenue, features a series of hotels and apartment dwellings in a variety of styles. It is located within the proposed Old Hyde Park West boundaries and will add 15 contributing properties. Armour Boulevard MRA District I was placed on the National Register in 1983. Janssen Place, formerly a residential enclave of turn-of-the-century railroad and lumber barons, is located six blocks east of the proposed district. It was listed on the National Register in 1976. The proposed Old Hyde Park East district is also proximate to Central Hyde Park, which runs from Gillham Road to Troost Ave. This residential district was placed on the National Register in 1980.

Historic Context of Kansas City: 1870-1930

(Excerpt from *National Register of Historic Places Multiple Property Form for Colonnaded Apartments of Kansas City, Missouri*.¹)

After the end of the Civil War and almost immediately after the completion, in 1869, of the Hannibal Railroad Bridge, the City of Kansas became a national shipping hub. Manufacturing and related commercial businesses became more clustered and grew in density near the growing network of rail lines. Distinct residential neighborhoods and retail commercial centers began to emerge in the developed parts of the City. With the establishment and growth of rail lines and the ensuing commercial development, Kansas City acquired the economic base and population to support a booming real estate market. The 1880s was the most active and prosperous decade of this era. By 1886, cable car and electric trolley lines replaced the horse-drawn car lines that operated in the commercial areas between the river levee and the Town of Westport. The extensive cable system promoted outward expansion through twenty-five miles of cable that reached all corners of the City, as well as outside the city limits.

Affluent families erected large "suburban" style homes in the Hyde Park and Roanoke neighborhoods, located in today's midtown area. It was during this period of expansion and growth that professionalism in architecture became firmly established in the City. The number of architects practicing in Kansas City tripled between 1884 and 1888, and peaked again during the building boom of 1904-1906. Ranging in skill and education from carpenter-builders to academically trained professionals, these "architects" erected buildings reflecting competent and innovative designs in the Second Empire, Queen Anne, Gothic Revival, and Romanesque styles.

Between 1910 and 1930, the City's newly initiated parks and boulevard plan began correcting the blight resulting from the City's rapid development, growing congestion, sprawl, and fluctuating land values. During this period, architecture shifted from the aesthetic abstractions of the Victorian period to styles that reflected the demands of rapid growth on construction, new technology, and economic realities of a new era. Architectural treatments reflected either a return to classical or simpler historic architectural forms or to more functional new styles. In Kansas City, this transition occurred slowly, in pace with the need for more housing and an increasing number of commercial structures. Typically, stylistic ornamentation – English Gothic, Renaissance, Baroque, Neoclassical, and Italian Renaissance – began to appear on functional, "modern" building plans. As time passed, even this historically derived ornamentation became flatter, crisper, and more mechanical.

The period also ushered in a change in the traditional housing types. Although developers erected a number of both large and small row houses, French flats, courts, apartment houses, and apartment hotels during the second half of the nineteenth century, Kansas City's residents demonstrated a decided preference for the single-family detached house. After the turn of the century, housing shortages, a rapidly growing middle class, and the emergence of speculative developers ushered in an era of small- to medium-sized four- to twelve-unit apartment buildings. As the City's population accelerated, so did the market for even larger apartment houses. Between the end of World War I and 1925, when the construction market peaked in Kansas City, both the number of smaller units and large apartment buildings (eighteen to twenty-four units) appeared in clusters in different neighborhoods, establishing apartment housing as a significant part of the City's residential patterns.

Old Hyde Park

The expansion of Kansas City's industrial base also resulted in a tremendous influx of population after the turn of the century. New residential neighborhoods were platted and built to meet the housing demand. Individuals and developers constructed single-family dwellings, duplexes, and multi-family apartment buildings. Because so much land was available for development (following the annexation of Westport in 1897 Kansas City had doubled its physical size), the majority of residential construction consisted of sizeable, single family homes.

Neighborhoods such as Old Hyde Park, developed for the middle and upper-middle classes, incorporated large, high-style homes on the same block as more modest vernacular houses and multi-family apartments.

Most of the area included in the Old Hyde Park West Historic District, and the separately nominated Old Hyde Park East District, was platted as portions of the Hyde Park subdivision between 1886 and 1901. Small fragments of the district comprise other plats, such as "Hanover Place" (Broadway to Wyandotte, north half of 3700 block) platted in 1886, "Arnold's Resurvey of T.G. Cross Addition" (south half of 3800 block, Broadway to Wyandotte) platted in 1887, and "Redemptorist College Place" (south side of West 34th Street between Wyandotte and Broadway) platted in 1899. These subdivisions were formed from farmland adjacent to the pre-Civil War town of Westport that had been owned by families associated with Westport and the western expansion of the United States (such as J. J. Mastin, Seth and Hugh Ward, and John Harris). Hyde Park was annexed by Kansas City in 1897 as part of a large tract of land, extending approximately from 31st Street south to Brush Creek and from the state line east to Prospect. Significantly this annexation included the formerly independent town of Westport, the progenitor of Kansas City.

Nearly three-quarters of the buildings extant in this area today were constructed by numerous builders and architects between the dates of plat and America's entrance into World War I (164 of them between 1900 and 1909 alone). The neighborhood benefited from landscape architect George Kessler's creation of the naturalistic Hyde Park to the east, a key element in Kansas City's burgeoning Parks and Boulevards system, and the development of the Roanoke subdivision to the west. Both of these developments were targeted toward upper class interests.

After World War I, few unbuilt lots remained in Old Hyde Park. In the 1920s, Kansas City's residential development shifted again as J. C. Nichols drew the market for single-family residences to the area south of his Country Club Plaza commercial development along Brush Creek. Developers were better capitalized, however, and Old Hyde Park became home to both high-rise apartments (like those along Armour Road), and larger colonnaded apartments (such as those on the south 200 block of West 38th St). Since World War I construction in Old Hyde Park has consisted almost entirely of apartments and non-residential properties. The majority of noncontributing structures in the district today are post-World War II apartment buildings representing more recent trends in architectural styles.

During World War II a large number of single-family residences in Old Hyde Park were divided into small apartments and sleeping rooms, increasing the already dense population of the urban neighborhood but contributing an essential housing service. After the war these renters gradually left Old Hyde Park for other, more-suburban residential areas. The neighborhood went into relative decline, as did similar urban neighborhoods in Kansas City and all over the country. In the last decade the neighborhood has experienced revitalization as long-time residents have been joined by new residents in renovating the neighborhood's historic fabric.

Development

During the period of peak construction in the district, between 1900 and 1909, Kansas City experienced a tremendous growth in population. There was a great need for housing, and many developers engaged in speculative construction to meet the demand. A number of developers purchased groups of lots on which they built houses, rapidly filling entire blocks. Several developers constructed a dozen or more homes on a single block within a single year. The following list represents those developers who made a significant impact on the Old Hyde Park streetscape through building construction on numerous parcels. One of the developers, Charles E. Finlay, was active right at the turn of the century, while the remaining developers were active between 1903 and 1908.

- * Charles E. Finlay: (c. 1899) - 3700 block Baltimore (6 buildings, both sides); (1899-1902) - 3700 block Wyandotte (9 buildings, odd)
- * J.D. Harmnick: (c. 1903) - 3600 block Central (7 buildings, odd); 3600 block Wyandotte (6 buildings, even)
- * E.W. Hayes: (c. 1904) - 3300 block Baltimore (5 building, odd)
- * J.O. Wade: (c. 1908) - 3800 block Baltimore (4 buildings, odd)

One locally prominent developer who was active in the proposed district was Charles E. Phillips, a noted builder of hotels and apartment buildings in Kansas City, including the Phillips House Hotel downtown. Phillips built several structures within the proposed district, including five buildings along West 38th Street (ca. 1921), a duplex at 206-08 West 34th Street, and 3418-20 Baltimore.

Phillips collaborated with architect Nelle E. Peters on three buildings within the district: 200-02 West Armour Blvd. (1920), 3814-16 Central St. (1921), and 300-06 West Armour Blvd. (1926). The buildings on Armour Blvd. are contributing structures to the Armour Blvd. MRA District I, listed on the National Register.

Architecture and Architects

The Old Hyde Park West Historic District was developed during a period of great architectural variety. The late 19th century was the heyday of exuberant Victorian architecture, while the early 20th century witnessed the return of more subdued Classical and Colonial Revival styles, the exploration of traditional Craftsman themes, and the development of the uniquely Midwestern Prairie style. The architectural vocabulary of these varied styles is represented both individually and in unique amalgamations on buildings throughout the District. The result is a neighborhood of substantial residences, eclectic in design, that present a streetscape largely unchanged since the 1920s.

The single-family residences represent the variety of architectural fashions popular from the end of the nineteenth century through World War I. Most of the single-family homes are 1 to 2 ½ stories. While a few architect-designed properties are included in the district, the majority are vernacular house forms embellished with stylistic elements. The locally popular "Kansas City Shirtwaist," a variation of the midwestern foursquare

United States Department of the Interior
National Park Service

Section
number 8 Page 77

Old Hyde Park West Historic District
Jackson County, Missouri

house, predominates. These houses are clad with brick or stone on the first story and shingles, clapboards, or stucco on the upper stories. Most have full-width or wraparound front porches and multiple roof dormers. Architectural embellishments reflect the various architectural styles elaborated below.

- Queen Anne: shingled siding, asymmetrical plan, wraparound porch, stained glass windows, decorative stick work
- Colonial Revival: center hall plan, gabled portico, pent overhang, sidelights
- Classical Revival: columns, cornice returns, dentils, modillions, Palladian window
- Tudor: small multi-light sash, simulated half-timbering
- Prairie: wide eaves, banded windows
- Craftsman: knee braces, exposed rafter tails, multiple gables and dormers, leaded and art glass windows

While the majority of homes in the district were not architect designed, some of Kansas City's most prominent architects did contribute designs to the neighborhood. While the majority of homes in the district were not architect-designed, some of Kansas City's most prominent architects did contribute designs to the neighborhood. Perhaps most notable among them was one of the few female architects of her day, Nelle E. Peters.

Working with builder Charles E. Phillips, Peters contributed five buildings within the district: 200-202 W. Armour (1920); 300-306 W. Armour (1926); 3813-3815 Central (1913); 3814-3816 Central (1921); and 3817-3819 Central (1913). The buildings along Central are typical three story, U-shaped, brick apartment buildings. Four of the buildings are Colonnaded apartments with two-story columns or posts resting on one-story brick piers. The other two buildings are similar in design, with enclosed sun porches replacing colonnaded porches on the facade. With its Gothic and Classical ornament around the door and window openings and the roof line, 300-06 Armour is reminiscent of Peters' designs on the Country Club Plaza. Known as the "literary group" of apartment buildings, the Robert Louis Stevenson, Eugene Field, Mark Twain, Washington Irving, Thomas Carlyle, James Russell Lowell and the Robert Browning, comprise the "Nelle Peters Historic District," which was designated to the Kansas City Register in 1989. Peters also designed Kansas City's Ambassador Hotel at 3560 Broadway, which is also listed on the National Register.

The concentration of Peters' designs in the proposed Old Hyde Park West district represents the second largest recognized concentration of Peters' work. Nelle E. Peters is credited with nearly 1,000 buildings during her 60-year career.

Five apartments by the area's leading female architect, Nelle E. Peters are included in the district: John McKecknie is recognized as one of Kansas City's leading interpreters of the turn-of-the-century Arts & Crafts school of design. Twelve buildings by McKecknie, and his firm McKecknie & Trask, are included in Old Hyde Park, including a concentration of eleven small apartment buildings at the west end of Armour Boulevard. McKecknie's work in the district includes the following properties: 100-06, 108-10, 112-14, 116-18 West Armour (1902-03); 109-11, 113-15, 117-19, 121-23 West Armour (1906); 212-14, 216-18, 220-22 West

Continuation SheetSection
number 8 Page 78Old Hyde Park West Historic District
Jackson County, Missouri

Armour (1905); 6-8 West 37th Street (1903). The majority of these buildings are two-story, colonnaded apartments embellished with McKecknie's own interpretation of Craftsman style. Identifying features include groups of thin posts instead of columns and ornate geometric brick and stone trim, especially at the eave line. 100-06 West Armour is a larger building of a Mediterranean-inspired design.

Other locally prominent architects whose work is contained in the Old Hyde Park West Historic District include:

- * Philip T. Drotts - 311-15 W. 38th Street (1925)
- * Otis Goddard - 3433-3435 Central (1911)
- * Alfred Hockaday - 220 West 34th Street (1901)
- * Wilder & Wight - 3800-02 Baltimore (1910)

The Old Hyde Park West Historic District retains the distinctive character of a late 19th-early 20th century neighborhood. The District's integrities of materials, design, and workmanship are strong, in spite of alterations to individual buildings and modern construction. The majority of alterations involve wall cladding, porch details, windows, and/or the construction of exterior wood stairs. Generally the alterations have only a minor affect on the character of the property and the district. Only seven of the 373 buildings constructed during the period of significance are sufficiently altered to be considered noncontributing elements. The district's integrity of setting is enhanced by the uniform setbacks of buildings and the large trees that still line the street. While modern apartment complexes, most constructed in the 1960s, disrupt the historic sense of scale in some areas, they do not damage the integrity of feeling for the larger district.

All of Baltimore Place, a condominium subdivision in Kansas City, Jackson County, Missouri.

Boundary Justification

The Old Hyde Park West Historic District is comprised of a residential area bounded by Linwood Boulevard, Central Street, Baltimore Street, and 39th Street. The district is limited mainly to properties constructed as residences along Central, Baltimore, Wyandotte, and numbered side streets. Properties along Main Street and Broadway are excluded from the district. The area along Main Street is itself a National Register Historic District, referred to as South Side National Register Historic District. Main Street and Broadway are both primarily commercial corridors, whereas Old Hyde Park West Historic District is primarily residential. These boundaries have been delineated to exclude the majority of commercial properties in the area (most of which have lost integrity due to extensive alterations) while including those portions of the streetscape that retain integrity from the period of significance. An Old Hyde Park East Historic District is also being nominated at this time. The two areas, though very similar, are not being nominated as a single district because of the wide strip of non-historic commercial development that separates the two residential neighborhoods.
