

Supplementary Listing Record

NRIS Reference Number: 01000947

Date Listed:

Property Name: Tower Grove Heights Historic District

County: St. Louis

State: MO

This Property is listed in the National Register of Historic Places in accordance with the attached nomination documentation subject to the following exceptions, exclusions, or amendments, notwithstanding the National Park Service certification included in the nomination documentation

Roger G. Reed

April 30, 2024

Signature of the Keeper

Date of Action

=====
Amended Items in Nomination:

Description: Section 7

3634 Connecticut Street

The property is listed as a contributing dwelling constructed c.1906 and a noncontributing brick garage facing the rear access alley. The noncontributing designation may have been based upon the late twentieth century garage doors alterations and the absence of a construction date for the garage. The masonry details, including segmental arch windows and pedestrian door facing the house, all meet the following description of historic garages in the nomination: "In general, garages are considered to be contributing if they clearly display exterior elements which identify them as historic garages. Such features may include brick walls, original or historic siding, or historic doors." The exterior of the garage, except for the alley doors, clearly suggest a construction date prior to 1932, the end date for the period of significance. The property, therefore, includes two contributing buildings.

NATIONAL REGISTER OF HISTORIC PLACES REGISTRATION FORM

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in How to Complete the National Register of Historic Places Registration Form (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

historic name Tower Grove Heights Historic District

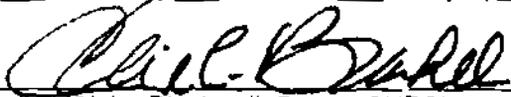

other names/site number _____, n/a

2. Location

street & number bounded by Arsenal Street, Grand Avenue, McDonald Ave., and Gustine Ave. not for publication N/A
city or town St. Louis vicinity N/A
state Missouri code MO county St. Louis [Independent City] code 510
zip code 63116

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act of 1986, as amended, I hereby certify that this X nomination _____ request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property X meets _____ does not meet the National Register Criteria. I recommend that this property be considered significant _____ nationally _____ statewide X locally. (_____ See continuation sheet for additional comments.)

8. Statement of Significance

Applicable National Register Criteria

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.)

- A owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or a grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- G less than 50 years of age or achieved significance within the past 50 years.

Areas of Significance (Enter categories from instructions)

Tower Grove Heights Historic District
St. Louis [Independent City], Missouri

Narrative Statement of Significance

Summary

The Tower Grove Heights Historic District in south central St. Louis [Independent City] is bounded by Arsenal Street to the north, Gustine Avenue to the west, McDonald Avenue to the south, and Grand Boulevard to the east. There are 1,237 resources (all buildings) in the district: 1,029 contributing (including one which is already listed), and 208 noncontributing. The neighborhood is overwhelmingly residential in character, but the eastern end of the district also includes commercial buildings on Grand Boulevard and many of the intersections within the district have corner commercial buildings. Of 1,029 contributing resources, 729 were originally exclusively residential buildings; 33 were commercial or commercial with residential (including the previously listed Dickmann Building); two are churches; one was built as a public library; and 264 are garages or large sheds. There are also 208 non-contributing buildings; all but five are garages or sheds. The original fabric of the neighborhood is highly intact, with very little demolition since the period of significance. Contributing buildings in the neighborhood were constructed between 1892 and 1932. Of the primary (non-garage) resources, almost 70% were built in the period from 1904 to 1909. Red brick is the predominant material, although a wide variety of other bricks are used at front elevations. Builders applied an eclectic mix of early 20th century revival styles to the dwellings and commercial buildings. Consistency in scale is maintained by consistent lot sizes on most streets, as well as deed-mandated setbacks and a minimum height of two stories. The neighborhood district is extremely intact: most of the blocks have no non-contributing buildings at the street and no gaps due to demolition.

About this Description

The following narrative description starts with a brief paragraph on demolitions in the neighborhood, then proceeds to describe the resources by property type. The types represented are Commercial Buildings, Institutional Buildings, and Residential Buildings. Within the commercial and residential sections, the buildings are described block by block according to the City Block number. The commercial buildings at Spring and Gustine are described with the residential resources, since they are typically mixed-use and are very much tied into the fabric of the residential streetscapes. Description of each primary resource also include a description of any associated outbuildings (usually garages). The number of contributing and non-contributing resources at each address is indicated in bold at the end of each description, noting the number of contributing buildings first followed by the number of noncontributing buildings.

St. Louis [Independent City], Missouri

Demolition

There are five lots in the neighborhood where buildings appear to have been demolished. One is a landscaped side lot at 3193 S. Grand. Three houses on Wyoming Street appear to have been removed for the surface parking lot for the First Divine Science Church (approximately 3621-31 Wyoming). Another parking lot is located at approximately 3147-49 S. Grand. In November 2000 the house at 3617 Hartford was demolished to make way for a parking lot for the commercial buildings on Grand; in January, 2001, three residences on McDonald were demolished to expand the parking lot for the Carpenter Branch Library.

Property Types

Commercial Buildings

The construction of commercial buildings in Tower Grove Heights occurred throughout the period of significance. 26 out of 33 commercial buildings in the district were constructed in the period 1905-1911, overlapping the period of greatest residential construction with a slight lag as the services followed the people. Styles are generally more elaborate than the residential buildings. Along Grand there is a good collection of brick buildings with white terra cotta detailing, particularly used as quoins, resulting in sections of unusually consistent streetscape. Examples of such buildings are located at 3141-45 S. Grand, 3151-57 S. Grand, 3171-73 S. Grand, and 3197-99 S. Grand.

Only a few buildings in the district were designed to be strictly commercial. Most are two and three stories high with apartment spaces at the upper floors. Exceptions include the two one-story noncontributing commercial buildings, the two-story office building at 3101 S. Grand, and the six-story Dickmann Building (3115-19 S. Grand; NR 12/30/99).

Individual descriptions of each commercial building along Grand Avenue follow. The corner store buildings in the residential heart of the neighborhood are described with the residential resources.

CB 2102

3101-13 S. Grand (1909; architect: Eames & Young; builder: Joseph H. Bright Building & Construction Co.) (photo 1)
The architectural firm of Eames & Young was the primary designer of the Cupples Station warehouse district (NR), and the two-story building at 3101-13 S. Grand uses some of the same devices. The second story of the brown brick commercial block features paired round-arched windows within a common blind round arch at both the east and north elevations. The primary elevations are finished with a corbel arcade cornice. At the east elevation are three storefronts and a single door to reach the upper story apartments.

Section 7 Page 7

Tower Grove Heights Historic District
St. Louis [Independent City], Missouri

The southernmost storefront has been rehabilitated in a historically appropriate manner; the middle one includes inappropriate infill; and the northern storefront is under construction at the time of this submission. At the western end of the north elevation is an additional storefront which currently houses a coffeehouse. The second story is commercial space.

1 contributing / 0 noncontributing

3115-19 S. Grand - the Dickmann Building (1926; architect: Wedemeyer & Nelson)

(Photo 2, right)

This six-story building is individually listed on the National Register of Historic Places (12/30/1999). It is tallest structure in the district and the immediate area. The front elevation is designed in a Gothic Revival style and finished in white terra cotta.

1 contributing / 0 noncontributing

3121-23 S. Grand (1907; architect: Mr. Rottler; builder: John Kleekamp)

(Photo 2, center)

This former Woolworth's store is three stories high and five bays wide. Its brown brick of the front elevation forms decorative details such as quoins. Window keystones, end blocks, and sill courses appear to be stone. The cornice and storefront windows have been replaced.

1 contributing / 0 noncontributing

3127 S. Grand (1908; architect: Matthews & Clarke; builder: Henry Brocker)

(Photo 2, 2nd from left)

This small commercial building is two stories high and three bays wide. Its first story is a glass storefront with recessed front door; the three windows at the second story are beneath a diapered red and white brick course and a parapet wall. A two-story narrow connector attaches it to the building to the south.

1 contributing / 0 noncontributing

3129 S. Grand (1906; architect: Wessbecher & Co.; builder: A. H. Fehlber)

(Photo 2, left)

This corner property's primary elevations face east and south. The three-bay, two-story east elevation matches its neighbor to the north in height. (The unusually high wall above the second story windows may have been added to connect to the building to the west.) Both primary elevations are covered with black structural glass at the first story, probably dating from after the period of significance. A one-story section at the back of the building appears to be an addition. A two-story connection attaches the front portion to the building to the north.

CONTINUATION SHEET**

Section 7 Page 8

Tower Grove Heights Historic District
St. Louis [Independent City], Missouri

The brown brick facade of this flat-roofed building is 2 stories high and 3 bays wide. The front is mostly symmetrical. The center bay terminates in a peak at the parapet wall; below this is a basketweave brick panel centering the 2nd floor. Three windows are at either side at the second floor. At the first floor, there are three storefront windows (the door is in the left one), with separate doors to the upstairs flats at either end of the façade. The building appears to be in good condition and has the following alterations: Part of parapet cap removed.

1 contributing / 0 noncontributing

3137-39 S. Grand (1907; builder: William Gruenwald) (Photo 3, right - partial)

The façade of this two-story brick building is divided into two distinct sections: a two-bay corner storefront, and a three-bay section with an applied false gable breaking through the parapet wall. Both storefronts have been altered, although the corner shop has recently been restored to one of its historic uses as a neighborhood pharmacy. The red structural glass covering the first floor of the northern half, however, dates from after the period of significance. The north elevation uses the same red glass at the first story; the two elevations are connected by an angled entrance. The second story window at the entrance bay is filled with glass blocks; most of the others at this story are three-over-three horizontal pane windows (non-original).

1 contributing / 0 noncontributing

3141-45 S. Grand (1909 architect: William Lucas; builder: William Gruenwald) (Photo 3, left)

The staccato rhythm of this five-bay two-story brick building is set by the narrow second and fourth bays, which house the doors to the upstairs apartments at the first story and paired windows at the second story. The other three bays are wider, each with a full storefront. All of the second story windows rest on a continuous stone sill and are surrounded with terra cotta quoins.

1 contributing / 0 noncontributing

3151-57 S. Grand (1911; builder: Hess, H.) (Photo 4)

This building which formerly included two storefronts at the first level and apartments upstairs has been sensitively converted to a single restaurant use. The former entrance to the second story, midway along the S. Grand Avenue elevation, is now used as the main entrance. Most of the first story is still the storefront windows, maintaining the original rhythm of the openings. Former shop entrances in the southeast and northeast corners face out from the building at a 45 degree angle. The upper stories and three entrance bays get good effect from white terra cotta trim. Two projecting bays face south to Juniata Street.

CB 2100

3159-61 S. Grand (1894 builder: Eicholz)

(Photo 5) The façade of this commercial building is four bays wide and two stories high. At the first story, rebuilt storefronts are to either side of a central entrance. At the brick second story, the two outer bays project slightly and house rectangular sash windows; a single round-arched window is each of the two center bays. A high parapet wall tops the composition. The brick part of the façade is painted a pinkish-red color.

1 contributing / 0 noncontributing

3163 S. Grand (1908; architect: Wessbecher & Hillebrand; builder: Frank Knapstein) (Photo 5)

This 4 bay brick building is two stories high plus a mansard level with a front-facing cross gable and parapet end walls. A narrow hipped dormer is at either side of the cross gable. There are four windows at the second story. The first story is remodeled, with a flaring hood over glass storefront windows. There is a contributing flat-roofed brick garage at the rear of the lot facing the alley.

2 contributing / 0 noncontributing

3165 1/2 S. Grand (1938 builder: Walter Noll) (Photo 5, far left)

This one-story building is considered non-contributing because its entire façade has been remodeled and because it falls outside of the period of significance. Facing Grand are a pair of windows at the left, then the door, then a set of three windows at the right, all framed in wood under a pent roof.

0 contributing / 1 noncontributing

3167 S. Grand (1897; builder: M. A. Moran)

3169 S. Grand (1897; builder: M. A. Moran)

(partially visible in Photo 6, right)

These are the only strictly residential buildings along Grand in the historic district. Constructed on the same building permit, the two have strikingly similar facades. Each is two stories high plus a mansard-style roof between end parapet walls. Projecting porches are at the right bay; each has a round-arched opening above it (a balcony door at 3167, a window at 3169).

3167 S. Grand uses pairs of sash windows at both elevations of the left bay, while 3169 uses single, larger windows at the right bay. There is a contributing gabled frame garage behind #3167.

3171-73 S. Grand (1911 architect: William H. Gruer; builder: B.J. Charleville)
(Photo 6, center)

Another two-story brick building, this one with three first-story storefront. At the upper story are six window units; the center two are projecting bay windows, with two terra cotta-quoined sash windows at the outer bays to either side. The two center bays are further emphasized by a higher parapet wall; the outer bays also use a parapet wall, and it appears that an applied cornice on either side has been removed.

1 contributing / 0 noncontributing

3177 S. Grand (1901) (Photo 6, left)

This two-story red brick building front four bays on Grand. A storefront is in the three south bays, wrapping around to the first bay on the south side. At the northern bay, there are two doors at the first story and a door with a balcony above. The southern three bays have replacement sash windows at the second story. Green paint highlights the applied cornice and simple parapet cap. The south wall at Connecticut Street has bricked-in openings at the first floor (an excellent match of brick, only noticeable because of the header bricks), with windows at the second story.

CB 2099

3179-89 S. Grand; 3611 Connecticut (1916 architect: Otto Wilhelmi; builder: George Moeller) (Photo 7, right; Photo 26, left)

This commercial building occupies nearly the entire half-block of frontage on Grand south of Connecticut. At three stories high, it is one of the largest buildings in the district. It includes a commercial section on Grand (tile construction) and a courtyard apartment building (brick construction) to the west. The long Grand façade has seven storefronts at the first story, and one central door to the upper apartment units. The upper two stories are punctuated by windows and balconies, topped by a terra cotta modillioned cornice. The western section includes three stories of balconied apartments around a central courtyard.

1 contributing / 0 noncontributing

3191 S. Grand (1910; builder: William Schmidt) (Photo 7, left)

This is a typical two-story, three bay brown brick storefront building with an apartment on the second floor. The first level storefront includes large windows to either side of a recessed front door; the narrow expanses of brick on either side of the storefront are painted black. Above an awning, three windows are surrounded by white terra cotta quoins. Above an applied cornice, the parapet wall steps up to a center peak. The south wall has several small windows a projecting bay at the second story.

3195 S. Grand (1905; builder: Mr. Holloway) (Photo 8, partially visible at right)

This former two-family building is set back from the street above an elevated front patio. Front doors are at opposite ends of the brick east elevation facing Grand; at the second story there are four sash windows under a stepped parapet. The façade is painted red, including a course between the first and second story where it appears that a cornice or other horizontal element has been removed. The white terra cotta parapet cap remains unpainted.

1 contributing / 0 noncontributing

3197-99 S. Grand (1909; architect: Oscar Geishorn; builder: Chapman Realty & Construction Co.) (Photo 8, left)

The brown brick elevation facing Grand is three bays wide; the center bay is emphasized with an elaborate white (painted) terra cotta surround at the front door and cartouched peak at the parapet wall. Second story windows have terra cotta quoins at both the Grand and Wyoming elevations, and an unusual coved cornice with lions' heads in place of modillions or brackets runs above. The southern storefront has an inset corner entrance behind a structural column.

An associated brick gabled garage (contributing) is located behind the building facing Wyoming Street.

2 contributing / 0 noncontributing

CB 2098

3201-03 S. Grand (1905 architect: William F. Holtman; builder: E. J. Lay & Son)

(Photo 9, right)

This red brick corner building is set at the sidewalk line on Grand, but its north elevation sits slightly back from Wyoming Street. The Grand Avenue elevation shows two storefronts to either side of a central door which leads to the second story apartments. There are six windows trimmed with limestone (include a full lintel with keystones) at the second story below a parapet wall with a pyramidal roofed tower-like projection at the corner. The main entrance to the attached commercial spaces is through a corner door set behind a structural iron column. It appears that the northern storefront has been restored with a historic replica cornice. At the north elevation facing Wyoming Street, four sash windows are at the second story. There are four small windows at the first story; three of them appear to be the upper portion of standard-sized window openings which have been filled in with brick. The fourth is over a door.

Institutional Buildings

There are three institutional buildings in the Tower Grove Heights Historic District: two churches and a public library. Individual descriptions follow.

St. John's Episcopal Church, 3666 Arsenal (Photo 11)

Built in 1907, St. John's was designed by local architect William Lucas. The red brick building is in the Gothic Revival style. The broad front-facing gable is dominated by a center stained glass window. An addition to the south and west, largely invisible from the street except as a large gothic-arched door opening in a section connecting the church and office building, was constructed in the 1950s. The former two-family attached to the west, also constructed in 1909, is owned by the church and was formerly used as an office. It is now rented out and is listed individually in the residential section.

1 contributing / 0 noncontributing

First Divine Science Church, 3617 Wyoming (Photo 12)

1916; architect: G. P. Wuest; builder: Hartman Building & Construction Company

This classical revival style brick building has a flat façade with a gabled parapet wall. The front steps lead to doors set within a classical round-arched opening; the doors are separated by Greek Ionic engaged columns, and the top of the arch is filled in with windows.

1 contributing / 0 noncontributing

George O. Carpenter Branch Public Library, 3309 S. Grand (Photo 13)

1926; architect: Trueblood & Graf; builder: Dickie Construction Company

This is one of the best-known commissions of local architectural firm Trueblood & Graf (also responsible for the Pythian Building in the Midtown Historic District, the Nurses Training Building at the Washington University School of Medicine, and numerous residences in the area). A stripped-down Beaux Arts design, the library reads from the exterior as one story high, clad with limestone. A central pavilion shows three large round-arched

St. Louis [Independent City], Missouri

openings (a center door with windows to either side); symmetrical lower wings are at either side, and an additional one-story section extends to the south. At the time of description, the public library was breaking ground for an addition to the south. Drawings indicate that the addition, while large in plan, will not overshadow the original building or significantly detract from its integrity.

1 contributing / 0 noncontributing

Residential Resources and Garages

The nature of the Tower Grove Heights Historic District is overwhelmingly residential. Almost all residences are located on the east-west streets in the district. (Utah Place, near the south end of the district, is an east-west street separated by a wide landscaped median.) In this section, the 744 residential resources located off Grand Avenue are described, along with the 464 garages. All but three are considered contributing resources. The primary material throughout the district is brick. Almost all of the buildings use brick wall construction (except as noted in individual descriptions). Red brick is used at almost all side and rear walls, but a rich variety of face brick is combined at the buildings' facades. Eight dwellings use stone at the front elevation, and one building (3711 Utah - Photo 24) is an excellent example of decorative concrete block.

Very few of the residential buildings can be categorized in terms of high style descriptions. Most use a standard revival vocabulary for decorative elements on almost generic façade arrangements. The same builder could construct dwellings on the same basic plan but with facades using different colors, cornices, porch details, and fenestration. The result was rarely any pure style, but a vernacular approach to the revival tendencies of the day. Most buildings in the district are classified under "Late 19th and 20th Century Revivals" in the National Register's descriptive system.

Because the National Register style definitions don't offer a way to differentiate the various exterior types found in Tower Grove Heights, it is useful in this case to break down the front elevations into common pattern types. The street elevations of the residences tend to fall into three major patterns: foursquares, "shaped parapet," and "front roof." The distinguishing characteristic of the Shaped Parapet (a term borrowed from the City of St. Louis' Preservation Plan) is a front parapet wall masking the flat roof behind. The Front Roof type is nearly identical, but instead of a parapet wall, a modest false front roof form is applied at the façade to hide the flat roof behind.

This chart indicates the number of buildings of each pattern. Please note that classifications can be somewhat subjective, and these numbers are best understood as rough figures rather than absolutes.

Type	Total	Single family
------	-------	---------------

United States Department of the Interior
National Park Service

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

Section 7 Page 14

Tower Grove Heights Historic District
St. Louis [Independent City], Missouri

	Number	dwellings
Foursquare	248	218
Shaped Parapet	289	37
Front Roof	122	23
Other	75	40
Total	734	318

An interesting conclusion is that the buildings patterns tend to be distributed according to use. All but 30 of the buildings classified as foursquares were built as single family dwellings, accounting for over two thirds of the total number of single dwellings. They are also much more likely to have been built by a developer than the other buildings in the neighborhood: 111 were constructed by J. G. Zimmerer, and an additional 25 for Davis & Woodward (please see section 8 for more information on the role of developers in the neighborhood).

Shaped Parapet and Front Roof buildings, on the other hand, were overwhelmingly built as multiple family dwellings rather than single families. This is probably due, in part, to the form's easy adaptation to smaller lots. Foursquares by definition have proportions that restrict their placements to larger lots, but a shaped parapet building comfortably fits behind 25 feet of street frontage. Lot sizes in Tower Grove Heights tended to be wider on streets reserved for single family use and narrower on streets where multiple dwellings were allowed.

All of the extant residences built in the historic period are considered contributing. The general absence of significant alterations can probably be attributed to a relatively high level of occupancy and maintenance. Local scholar Mark Abbott, a history professor at Harris-Stowe State College as well as a district resident, has concluded that the nominated portion of Tower Grove Heights has retained a fairly middle-class demeanor throughout the decades, never falling prey to the disinvestment and neglect that have paralyzed many St. Louis neighborhoods.

The most vulnerable building element in the residential resources is clearly the wooden front porch. About 93% of the exclusively residential buildings in the district have front porches, mostly single-bay. Over a quarter of these show obvious alterations. The most conspicuous alteration is the replacement of original porch piers with two-dimensional iron supports, often in conjunction with the replacement of the porch base (see photos 31, 34 for good examples of this type of replacement).

Of the 744 residential resources counted in this section, 13 were originally constructed with some commercial component. All of these are located along Spring and Gustine, almost all at corners. The intersection of Spring and Wyoming has first floor commercial space at all four corners. As is the case in many neighborhoods, keeping commercial corner storefronts intact and

Section 7 Page 15

Tower Grove Heights Historic District
St. Louis [Independent City], Missouri

occupied has been a challenge in Tower Grove Heights. Some have been converted to exclusively residential use (the buildings at 3241 and 3151-61 Spring and at 3800 Wyoming are excellent examples of sensitive conversion - see photo 51).

Individual building descriptions follow. Except as noted, architects are usually unknown or nonexistent. The building use given is both the original and present use unless otherwise noted. The "Style/Design" category picks out the nearest National Register category, while the "Second Style" field offers other useful terms, particularly those noted in the City of St. Louis Preservation Plan.

Garages are included in the descriptions in this section (261 contributing and 203 non-contributing, for a total of 464). In general, garages are considered to be contributing if they clearly display exterior elements which identify them as historic garages. Such features may include brick walls, original or historic siding, or historic doors. (Please see photos 57, 59 and 60 for foreground examples of contributing brick garages. Photo 58 illustrates two contributing frame garages. Photo 59 includes a non-contributing garage in the background.) Most of the garages which are considered non-contributing probably date from the historic period but are too obscured by modern or later siding and usually include replacement doors. Where garages are considered non-contributing due to their recent construction, it is either noted in the description of the material (concrete block garages are noncontributing unless otherwise noted) or a separate note about the newness of the resource. At the end of each individual description is a bold summary of the number of contributing and noncontributing resources at each address.

CB 2095 - McDonald Street

3619 McDonald (1903; Builder: Happel, William)

Style/Design: Late 19th and 20th Century

Second style: Foursquare

Use: Multiple Dwelling: Two-family flat

This building has an asphalt-shingled hip roof. The red brick facade (brown brick at the foundation) is 2 stories high and 3 bays wide. Instead of a front porch, the doors are set into an alcove at the left bay. Character-defining features include paired brackets at either end of facade supporting eaves. The building appears to be in good condition with no significant alterations. There is a contributing 1-story flat-roofed brick garage at the rear of the property.

(Photo 25, second from right)

Style/Design: Late 19th and 20th Century

Second style: Front roof

Use: Multiple Dwelling: Two-family flat

This building has a flat roof with a false-front hip. The brown brick facade is 2 stories high and 3 bays wide. There are two separate front porches, the original roofs now replaced with incompatible awnings. Character-defining features include the unusual front roof design (hides flat roof behind): steep shed slopes to front between two parapet roofs, with projecting cross hip. The building appears to be in good condition. There is a noncontributing 1-story flat-roofed frame garage at the rear of the property.

Tower Grove Heights Historic District
St. Louis [Independent City], Missouri

Summary

The Tower Grove Heights Historic District in St. Louis is locally significant under Criterion C (Architecture) and Criterion A (Community Planning & Development) as an excellent and highly intact example of an early 20th century urban neighborhood. It is remarkable for its high level of integrity and architectural consistency among the 770 primary (non-garage) buildings. In addition, it is a successful example of the neighborhood-wide enforcement of architectural standards such as building line, number of stories, and materials. The rapid build-up of the neighborhood (80% of the buildings were constructed in a ten-year period) meant that most of the 220 builders represented in the neighborhood were dealing with the same style vocabulary. These factors resulted in an unusually architecturally coherent neighborhood in which the majority of residences are similar but unique vernacular expressions of national styles. The district is overwhelmingly residential, although there is a commercial strip along the eastern boundary. A total of 1237 resources are represented (one of these, the Dickmann Building, is previously listed on the National Register). Broken down by original use, this figure includes 733 dwellings, 37 commercial or institutional buildings (most of which also include residential units), and 467 garages. Of the 208 noncontributing resources, all but five are garages. There are no vacant lots (although there are four small surface parking areas where a total of eight residences have been torn down). The period of significance of the Tower Grove Heights Historic District is set from 1892 (the date of the earliest building in the district) to 1932, the date of the last building to be built within the historic development pattern.

Background

The eastern portion of the Tower Grove Heights Historic District, located approximately three miles southwest of downtown St. Louis, was included in the city limit expansion of 1855. The new boundary sliced through the middle of the property which belonged to heirs of landholder John D. McDonald. By the time the remainder of the tract was annexed by the City in 1876, it was owned by the heirs of William Switzer, a prominent St. Louis wholesale grocer.

The Compton & Dry perspective view of St. Louis in 1875 (Figure 1) reveals that the future subdivision was still in agricultural use at this time. Three dwellings were within the historic district boundaries, the rest of the property apparently divided between fields and pasture land. To the north across Arsenal Street, Henry Shaw's Tower Grove Park had recently opened to the public. Tower Grove Park (NR 2/17/1972; NHL 12/20/1989) was conceived as a walking garden displaying the full range of Shaw's botanical interests, including a wide variety of foreign and native tree species. The Heights' proximity to the park would later be a major selling point, its healthfulness and beauty featuring prominently in a series of early 20th century advertisements. In 1875, the land to the west, owned by James Russell, included clay and coal mines. These had largely disappeared by the early 20th century.

In 1878, the tract was acquired by the Connecticut Mutual Life Insurance Company. Founded in 1846, Connecticut Mutual was one of the nation's first life insurance companies; it opened a St. Louis office in 1848. By the 1920s, the company claimed it was the oldest continuing life insurance agency west of the Mississippi.¹ Although the company's primary interest was insurance, it also met other financial needs of its policyholders.

After the Civil War, William Switzer took out a \$500,000 loan from the company using 30 acres of his holdings as surety.² The company at that time appraised the property (which included land on both sides of Grand) at over one million dollars. In or after 1871, having paid off much of the original debt, Switzer sought and received an additional loan for \$250,000. After his death in 1874, however, Switzer's estate was evidently unable to meet his obligations. In 1878, trustees Samuel Halliday and Edward Harrison sold property in 27 city blocks to the Connecticut Mutual Life Insurance Company for only \$857.55 in lieu of foreclosure.³

The company set about improving the property, naming new streets "Hartford," "Connecticut," and "Humphrey" (the maiden name of a company official). A plat was filed in 1881 for the Tower Grove Park and Grand Avenue Addition, which included all of the nominated area (south to McDonald) and a smaller area on the opposite side of Grand to the east. On the same day that the addition was dedicated, the company deeded portions of blocks 2101 and 2102 to Robert Carr and Henry Block of Pike County (north of St. Louis). The pair also acquired all of blocks 4110-4111 and selected lots in 2099, 2100, 1462, and 1463.⁴ In 1890, the two sold their interests in the blocks to realtor Richard T. Blow for a total recorded price of \$100,000. Blow in turn delivered much of this property to contractor John Zimmerer (who would later become a major force in the development of the historic district).

Most of the Tower Grove Park and Grand Avenue Addition, as well as several blocks north of Arsenal on the east side of Grand, was replatted as the Tower Grove Heights Addition in 1897. It included all of the nominated property except for the property owned by Blow (the two northeast blocks and a few portions of nearby blocks). No special property restrictions were included in this addition, but deed restrictions would be included in individual deeds from this point onward. A later newspaper account noted that after this plat was filed, Connecticut

⁴ The chain of title was unclear on when these blocks were acquired. Carr and Block owned them by 1883, when they split the joint ownership and each assumed individual ownership of about half of the property.

Mutual made improvements to the property “including granitoid walks and gutters, water, gas and sewer mains and electric light.”⁵

Newspaper advertisements indicate that shortly after the turn of the century, Connecticut Mutual was marketing lots in the Tower Grove Heights Addition through a series of agents. A 1904 advertisement shows McNair, Harris & Jones Realty Co as the agents for Tower Grove Heights. From their office at Grand & Arsenal, they sold lots for 10% down with 5% interest. The same firm would later represent Connecticut Mutual in the sale of the property.

The insurance company’s history records the following chain of events:

. . . as years passed, the company found it lacked experience in urban property management and sought to divest itself of the property. An opportunity did not appear until shortly after the turn of the century. At the time the Chouteau Land and Lumber Company offered to trade a vast domain, 70,000 acres of timberland in southeast Missouri, for the Switzer land. Connecticut Mutual showed interest. It dispatched portly Jacob Humphrey Greene . . . to Missouri in the spring of 1903 to look the situation over. . . . Connecticut Mutual turned over its urban holdings in central St. Louis for a domain stretching across four frontier counties. ⁶

The role of the timber company is unclear in the deal, as it does not appear in the chain of title or contemporary newspaper accounts. What does show up is that all of the remaining Tower Grove Heights property, now expanded to 31 blocks, was sold to Cliff H. McMillan on January 18, 1905. McMillan, the secretary of the Mercantile Trust Company, was acting as trustee for the newly incorporated Connecticut Realty Company. All 1,000 shares were owned by directors of the Mercantile Trust; the largest stake was held by Lorenzo Anderson, a founder of the Trust, who owned 800 of the \$1,000 shares.⁷ The newspaper estimated the selling price of the tract at one million dollars, the same amount as the realty company’s starting capital.

A 1902 account described the special real estate expertise of Anderson and the Mercantile Trust:

The real estate department, which constitutes a special and very important feature of this company, is the successor of the Anderson-Wade Realty Company, established 1887 by Lorenzo E. Anderson and Festus J. Wade, which firm succeeded in a very short time to stand in the front rank of the branch, and to

parapet walls, projecting bays (most often over the front porch), roof treatments, and varying window shapes. As a result, there are very few places in the neighborhood where the buildings appear to have an obviously “cookie cutter” approach, despite the fact that most use the same major elements to organize the façade. There are only a few examples in the neighborhood of buildings which are identical or nearly so.

The building types and styles found in Tower Grove Heights are not significantly different from those built throughout the City of St. Louis in the first decade of the 20th century, but the restrictions on development resulted in a more architecturally consistent neighborhood than most. In the 19th century, deed restrictions were commonly found in high-class sections of St. Louis, particularly private places, but were uncommon in middle-class areas like Tower Grove Heights. The creation of areas such as Tower Grove Heights, which imposed architectural standards for middle-class dwellings, can be seen as a precursor to the modern suburban subdivision.

Integrity

The nearly complete integrity of such a dense urban neighborhood is unusual in St. Louis. There are no vacant lots, although approximately 8 buildings have been demolished to create surface parking lots. Of the 770 extant primary buildings, only five are non-contributing. Because of the success of the South Grand Business District, it is possible that more threats to the neighborhood will soon appear in the form of increased demand for parking. Historic designation may help protect the neighborhood from this and other possible encroachments.

Verbal Boundary Description

The nominated area includes all of City Blocks 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 4110, 4111, 4112, 4113, 4114, and 4115 in the City of St. Louis, Missouri. This area is bounded by Arsenal Street to the north, Grand Avenue to the east, McDonald Street to the south, and Gustine Street to the west.

Boundary Justification

These boundaries are the same mentioned as the “western tract” of Tower Grove Heights in the 1905 article “ ‘Tower Grove Heights’ sold for \$1,000,000.” “The western tract, consisting of 14 city blocks, is bounded on the east and west by Gustine and Grand avenues and on the north and south by Arsenal and McDonald avenues.” The northern boundary is set by Tower Grove Park South of the district, the lack of guiding deed restrictions is immediately apparent. Directly across the street from the southern boundary, for example, are many single story houses mixed in with the two-stories. To the west, construction is notably later than the period of development in Tower Grove Heights (except for the area closest to the park). Grand Avenue serves as the eastern boundary. Although the integrity of the west side of Grand in the district is overall very good, the east side of the street is less intact. In the three blocks between Arsenal and Connecticut, there is only one potentially contributing building. In the residential section east of Grand, there has also been considerable demolition, particularly in the northern blocks. Although this area is not necessarily ineligible for listing, its lessened integrity makes Grand Avenue a logical stopping place. Future research may determine that portions of the original subdivision lying east of Grand may also be eligible for inclusion in the historic district.
