Pomme de Terre State Park

CEDAR BLUFF TRAIL

Cedar Bluff Trail generally follows the rocky bluffs along both sides of an upland ridge protruding into Pomme de Terre Lake. The trail passes through mature stands of oak, hickory, ash and scattered maple trees as well as areas of eastern red cedar and chinquapin oaks that are indicative of the thin soils found along ridge tops. Along the way, deer, wild turkey, cardinals, purple finches and numerous other animals and birds may be seen or heard. Wildflowers as well as redbud and dogwood trees are in bloom during spring. Fall foliage brings more color and winter offers spectacular views after the trees have shed their leaves.

The main loop is signed in a counterclockwise direction. For those hiking from the campground, the main trail can be reached using a .30-mile spur located across from the check station. Three benches along the trail are perfect places for the hiker to stop, catch their breath and take in scenic views of the lake. A fourth bench and a small wooden span over a wetweather drainage creek are located along the campground spur. Caution should be used when crossing the beach access road; the trail and white connector intersect this road in three areas. Using white connector 1 shortens the hike by approximately half.

Distance: 1.6 Miles

Uses: Hiking Blazes: Yellow White 2 Class: Loop Surface Type: Natural Trail Rating: Moderate Estimated Hiking Time: 1 Hour, 12 Minutes Trailhead & GPS Location: 37.88258, -93.30385

Elevation profile is not available

You may experience:

2) Natural Surface-dirt/mud/gravel, shifting rock, slippery surface, etc.

- 3) Rocks, roots and/or downed vegetation on trail
- 8) Bluffs or drop-offs next to trail
- 9) Bridges and/or structural crossings
- 11) Occasional water over trail
- 12) Road/highway crossing

Slippery conditions and/or downed vegetation

2 Natural surface: dirt, mud, gravel, shifting rocks, slippery surface, etc.

3 Rocks, roots and/or downed vegetation on trail

- 4 Low-hanging vegetation **6** Physically challenging obstacles
- Wood or stone steps

• Steep grades and inclines over 10%

Bluffs or drop-offs next to trail

Bridges and/or structural crossings

• Water/stream crossings without bridges

Occasional water over trail

- Provide the second s
- Emergency response signs
- Narrow passages

Baised or protruding obstacles

- Electric fence crossings
- Bison/elk

 Rapidly changing weather conditions

Motorized boat traffic

Unexpected waves

Changing water levels

Surface or submerged objects

TRAIL BLAZE COLORS & SURFACE TYPES

The maps on this website indicate the blaze colors for each trail. If more than one trail shares tread, that portion of the trail is identified by more than one color. The surface type of a trail is indicated on the maps generated by this website by a pattern overlapping the blaze color of the trail.

TRAIL TYPE – Loop, Multi-loop, One Way, System or Multi-section A loop trail is one that will return you to the trailhead. Multi-loop trails offer two or more separate loops, ex, a trail having a north and south loop. A **one-way** trail takes you from the trailhead to the farthest point on the trail and you will have to retrace your steps to return to the trailhead. If you plan to return to your starting point on a one-way trail, you will have to double the distance to calculate your estimated mileage and/or hiking time.

A trail system is a series of interconnected trails that allow you to chose your own route.

A Multi-section trail offers two or more separate sections, ex. Katy Trail State Park, and distances are shown both for the entire trail and the sections.

YOU MAY EXPERIENCE

These conditions are all things you may encounter while on a Missouri state parks trail. Trailhead signs at the start of each trail also indicate which conditions exist on that trail.

ESTIMATED HIKING TIME

The estimated hiking time was determined by considering the average user's speed and the conditions that might be experienced on a specific trail. Your speed may be slower or faster than the time listed.

GPS COORDINATES

There are several methods of communicating GPS coordinates. Most GPS units will convert from one coordinate system to another. If you require a different coordinate system for your unit, visit dnr.mo.gov/gisutils/ to convert the coordinates shown on this map to another version.

NATURAL AREAS / WILD AREAS

Natural areas are identified in pink. Natural areas are recognized as the best remaining examples known of Missouri's original natural environments. These natural areas are managed and protected for their

scientific, educational and historical values. Missouri state parks have 38 designated natural areas, encompassing almost 22,000 acres.

Wild areas are identified in brown. The Missouri Wild Area System is made up of large tracts of land set aside as wilderness, which make the perfect setting for hiking and

backpacking. A wild area must be 1,000 or more acres in size, show little impact from humans, and possess outstanding opportunities for solitude. They are strictly protected for their wilderness benefits as well as for their use for environmental education and scientific study.
